MASS. SEVERAL ACTS OF THE LEGISLATURE

FORTY-THIRD REPORT

TO THE

LEGISLATURE OF MASSACHUSETTS

RELATING TO THE

Registry and Return

OF

BIRTHS, MARRIAGES, AND DEATHS

IN THE

COMMONWEALTH,

FOR THE YEAR ENDING DECEMBER 31, 1884.

TOGETHER WITH THE REPORT RELATING TO THE RETURNS OF

LIBELS FOR DIVORCE

FOR THE YEAR 1884.

PREPARED BY THE

SECRETARY OF THE COMMONWEALTH.

WITH EDITORIAL REMARKS BY

FRANK WELLS, M. D.

BOSTON :

WRIGHT & POTTER PRINTING CO., STATE

18 POST OFFICE SQUARE.

1885.

1000

Commonwealth of Massachusetts.

SECRETARY'S DEPARTMENT, BOSTON, Sept. 15, 1885.

To the Honorable Senate and House of Representatives :

In accordance with the requirements of the Public Statutes, I have the honor to submit herewith the Forty-third Annual Registration Report, relating to the Births, Marriages, and Deaths occurring in the Commonwealth of Massachusetts ; also, in conformity with the provisions of chapter 194 of the Acts of 1882, the report relating to Libels for Divorce in the several counties ; during the year ending Dec. 31, 1884 : together with editorial comments and deductions by Dr. Frank Wells, whose able services in this and in other directions in previous years have been widely recognized and commended.

Respectfully submitted,

HENRY B. PEIRCE,

Secretary of the Commonwealth.

FORTY-THIRD REGISTRATION REPORT.

(1884.)

The estimated population for 1884, calculated from the number of assessed polls of that year (511,907), was 2,037,390.

In the year 1884, there were recorded 48,615 births, 17,333 marriages and 36,990 deaths; or 1,330 more births, but 861 fewer marriages and 758 fewer deaths than in the preceding year.

The excess of living births over deaths was 11,625, which is 2,088 more than the same increase in 1883, and the largest since 1877.

The approximate rates for the year are : —

Births,	23·86 to 1,000 of estimated population.
Marriages,	8·51 “ “ “ “ “
Deaths,	18·15 “ “ “ “ “
Excess of births over deaths,	.					5·71 “ “ “ “ “

This would indicate one child born alive to every 41·9 persons, one married to every 58·1, and one death in every 50·5 living.

Table 1 exhibits the number of births, marriages and deaths and the variations in rates for a period of years. The estimated birth-rate for 1884 is very nearly the same as that for the preceding year, and the lowest, with the exception of that for 1879, 1882 and 1883, since 1850. The excess of this rate over the death-rate (5·71) is 2·07 lower than the average for the period between 1850 and 1880, but ·90 higher than in 1883.

TABLE 1. — *Births, Marriages, and Deaths with the Population and Rates, 1850-1884.*

BIRTHS.

While the number of births, which took place in 1884, was the largest in any year since 1850, the rate for living births (23·86) is the lowest, with three exceptions, for thirty-three years, and 3·17 below the quinquennial averages for the same period. (Tables 3 and 4.)

TABLE 3. — *Births for Twenty Years.*

YEARS.	Born alive.	Still-born.	Total.	YEARS.	Born alive.	Still-born.	Total.

1865, . . .	23.87		1880, . . .	24.80	

1881, 24.21; 1882, 23.76; 1883, 23.82; 1884, 23.86. (Estimated.)

By a reference to Table 5, it will be observed that the most marked decrease in the birth-rates, since 1865, has been in Barnstable, Dukes and Nantucket, Norfolk and Plymouth Counties. In the former two and in Norfolk the population has suffered a decrease, while in the latter there has been a material increase in the same period.

The greatest increase in the birth-rates is found in those counties, which contain the largest foreign-born element, whereas in those, in which the native population predominates, there has been a decrease in these rates, or, at best, but a slight gain.

In Table 6 may be studied the birth-rates as affected by density of population. It will be seen that the average rate for the quinquennial period between 1875 and 1880, in the sixteen cities, is slightly in excess of that for the previous five years. In the towns, containing less than one thousand of population, there has been a material decrease in the birth-rates since 1880.

For the period of fifteen years, from 1870 to 1884, 53·04 per cent. of the births occurred in the last half of the year, 26·69 per cent. in the third quarter, 26·33 per cent. in the fourth quarter, 23·52 per cent. in the second quarter, and 23·46 per cent. in the first quarter.

The largest average number of births took place in August. The order of the remaining months is October, December, July, September, November, March, June, January, May, April, February.

Among the illegitimate births, there seems to be a tendency towards an increase in the proportion of males as compared to females. The ratio for the thirty-one years, prior to 1884, was 100·2 illegitimate males to every one hundred females, whereas for the period between 1852 and 1870 this ratio was 95·3. In 1884 it was 106·9, and in 1883 106·1.

Table 9 shows the proportion of male to female births for a period of thirty-two years. The ratio of male to female children born alive varies but little from year to year,—that for 1884 being very nearly the same as the aggregate for thirty-one years.

The excess of still-born males over females in 1884 — 138·3 of the former to every one hundred of the latter — was somewhat less than in the thirty-one years previous.

The proportions of male to female births are very uniform in the various counties from year to year. This uniformity is particularly noticeable in the State at large. For the period of fifteen years, between 1863 and 1877, the excess of males over females was most marked in Dukes and Nantucket, Hampshire, Barnstable, Berkshire and Plymouth Counties. Of all the counties, however, Dukes and Nantucket, taken together, were the only ones which in the past year exhibited an excess of female over male births, the percentage of the former being 58·3, as compared with 41·7 of the latter. In only 16 births was there a failure to return the sex.

By a reference to Table 11, it will be observed that there were 1,016 more children born in 1884 of foreign parents than of native. This excess is 1,569 greater than in 1882, and 240 greater than in 1883. The number born with mixed parentage was 8,671, or 1,486 more than in 1880, and 502 more than in 1883. In Dukes and Nantucket there were 17 native births to one foreign; in Barnstable, 3·71 to one; in Plymouth, 3·34 to one; in Franklin, 1·97 to one; in Hampshire, 1·49 to one; in Berkshire, 1·46 to one; in Norfolk, 1·41 to one; in Essex, 1·21 to one. In all the above counties there has been a decrease in these proportions as compared with the previous year, with the exception of Dukes and Nantucket and Essex. The aggregate decrease in the ratios for the counties mentioned is 6·20 to one, in comparison with the statistics for 1882, although there is exhibited an increase of 2·14 to one over the record for 1883. In Suffolk the births of foreign parentage exceeded those of natives, in the proportion of 1·50 to one; in Hampden, 1·45 to one; in Bristol, 1·21 to one; in Worcester, 1·12 to one; in Middlesex, 1·10 to one. This indicates a slight increase over the statistics for 1882, but a still smaller decrease, as compared to those for the previous year.

In all the counties of the State there have been gains in the numbers of children born of mixed parents, with the exception of Dukes and Nantucket, and Franklin.

The percentage of native births in 1884 (Table 12) was less than for any year since 1873, and 1·27 below the average ratio for the above period. While there has been but little change in these percentages during the past twelve years, — although a quite uniform decrease in the ratios of foreign births, — it is very observable, as might be expected from the large foreign immigration into this country, that there has been a marked increase in the percentages of mixed births. These results may be better studied in Table 13, which shows the striking decrease in the percentages of native births since 1849 — an average decrease of 18·18 — the less noticeable decline in the ratios of foreign births, and the great increase in those with mixed parentage. This increase has been very steady since 1849 — the statistics showing a percentage of 18·39 in 1884 as compared with 1·02, the average for the five years between 1849 and 1853. A contemplation of these sta-

tistics certainly suggests the thought that we are gradually losing our distinctive nationality.

Plural Births. — In 1884, 437 women gave birth to 879 children, of which number 864 were twins and 15 were triplets. This is the largest number recorded in a period of twenty years, and 288 more than in 1865. In proportion to the total number of births in each county, Hampshire had the largest percentage of plural births, while in Dukes and Nantucket there were none. The percentage of those born of native parentage was smaller than in any year of the previous twenty, with the exception of 1874 and 1876 — the ratio in the latter year being the same as in 1884. For the foreign-born, the ratio was the largest in seven years, and 1·2 higher than the average for the twenty-years period. The percentage excess of those born of foreign parentage, over those of native birth (10·5), was 1·2 greater than the average excess for twenty years. Tables 15 and 16 show the variations for a period of years.

Illegitimate Births. — Table 17 shows, that, although the proportion of children born out of wedlock was less in 1884 than in the preceding two years, still it indicates a very steady advance since 1865, in which year the ratio to every one thousand births was 8·9, as compared with 18·4 for the year under discussion. The average proportion for the twenty years is 13·4 per cent., while that for the first ten years of this period is 9·6 per cent., and for the last decade, 17·2 per cent., or an increase of 7·6 per cent.

In Table 18 may be studied the nativity of the population, according to the census of 1880. This table has been inserted, in order that a more intelligent comprehension may be had of the following tables, which give the comparative statistics of illegitimacy, by parentage. It is assuredly worthy of remark, that of the entire population of Massachusetts, by the last census, only 50·61 per cent., or but a fraction over one-half, are of purely native-born parentage.

The percentage of native-born mothers of illegitimate children was lower in 1884, with but two exceptions (1875 and 1883), than in any year recorded in Table 19, and 3·3 below the average for twenty years. This ratio (49·8) is also lower than the average percentages for the two decades of the above period, which decades exhibit average proportions of 53·4 per cent. for the first, and 52·9 per cent. for the last ten years.

For foreign-born mothers, the percentage of illegitimacy is higher than the average for the twenty-years period, ·3 lower than the average for the first decade, but 2·0 above that for the

last ten years. The comparative ratios for the two decades are 41·7 and 39·4, respectively.

The average excess in the percentage of native-born mothers of illegitimate children over the foreign, for the period of twenty years, is considerably greater than the proportion for 1884. This excess is much more marked in the first than in the last ten years of this period.

Of the 894 illegitimate births which took place in the State (Table 20), 60·07 per cent., or not quite two-thirds, occurred in Suffolk County. Berkshire exhibits a proportionate ratio of 1·46 per cent. over that for the previous year, and Franklin one of ·61 of one per cent., while in Middlesex there is a decreased percentage of 3·49, and in Dukes and Nantucket one of ·66 of one per cent. Barnstable has the same record in both years.

THE STATE,	1,783,085	894	100.00

In Table 21 may be studied the proportion of illegitimate births according to nativity, by counties. As the calculations are based upon the population of 1880, but little more than an approximate knowledge of the rates can be obtained; for purposes of comparison, however, between the different counties the figures are sufficiently accurate. No account has been taken in this table of the mixed population. Suffolk County exhibits both the highest native and the highest foreign rates, as was also shown in the preceding year. In Norfolk County the lowest native rate is seen, and in Hampshire, next to Barnstable and Dukes and Nantucket, which have none, the lowest foreign rates.

Berkshire and Franklin Counties show the largest increase of native rates over the statistics of 1883, while in Dukes and Nantucket the decrease in these rates is very marked.

Of the counties exhibiting percentages of foreign illegitimacy, there has been the greatest increase in Franklin, Middlesex, Berkshire and Bristol. In Plymouth there has been the largest decrease.

Table 22 shows a comparison between the nativity of illegitimate births in the different counties in 1884, and the average for the past six years. It will be noticed that in all the counties there has been a decrease in the native ratios, with the exception of Plymouth, which county exhibits a decided increase, and Hampshire, in which the increase is but fractional. In Barnstable and Dukes and Nantucket all the illegitimate births, which took place in 1884, were from native-born mothers. Correspondingly, there has been an increase of ratios for those of foreign extraction in all the counties, with the exception of Hampshire and Plymouth—the most noticeable advance being found in Bristol. The largest decrease is seen in Plymouth.

Worcester,	44	27	61.36	13	29.55	4	9.09	69.02	23.84	7.14

The average ratio of illegitimate births in every one thousand, for ten years, is found to be by far the largest in Dukes and Nantucket, which counties, taken as a whole, show a proportion of 50·1 per thousand. This is 44 in a thousand greater than in Worcester, and 32·8 per one thousand higher than the average for the State. As compared with this average, Plymouth and Suffolk, in addition to the counties already mentioned, are the only ones which have a larger proportion. In comparison with the previous year, the most marked variation in the ratios for 1884 is in Dukes and Nantucket, being 45·0 per thousand lower than in 1883, and 20·7 less than the average for ten years.

MARRIAGES.

There were 17,333 marriages recorded in 1884, with an approximate rate of 17·02; or 8·51 marriages per 1,000 of the estimated population. This indicates one person married in each 58·1 living, as against one in each 54·5 in 1883, one in each 54 in 1882, one in each 56 in 1881, and one in each 57 in 1880. With the exception of the period between 1875 and 1879, the rate is the lowest since 1855, and 2·06 per cent. lower than the average for twenty-nine years.

The steady decrease in the marriage rates, taken in connection with a similar decrease in the percentage of births, which is most marked in our native population, is worthy of consideration. Many causes have been assigned to account for this diminution both in the numbers of marriages and of births, but as has been before indicated, it would seem most probable that the tendencies of modern life lead to a physical deterioration and to an individualism, both of which militate against the large families of former years.

County Marriage-Rates. — It will be seen by a study of Table 25 that, although there was a decrease in the marriage-rates in all the counties from 1871 to 1880, yet, since the latter year, there has been a varying increase in the number of marriages in all, excepting in Dukes, Franklin and Hampshire. In Barnstable, Berkshire, Dukes, Essex, Hampden, Hampshire, Middlesex, Norfolk, Plymouth, Suffolk, and Worcester there were fewer marriages in 1884 than in the previous year.

Table 26 shows the marriage rates, as affected by the density of population. It will be observed that the average rates for the sixteen cities, which had been incorporated prior to 1880, were somewhat lower for the period between 1875 and 1880 than for the five years previous. The difference is slightly greater than for the rest of the State; this is likewise true of the number of marriages since 1880.

Following the usual rule, the largest number of marriages took place in November, and in the fourth quarter of the year; the smallest number occurred in March, and in the first quarter.

1884, . . .	29·1	25·1	26·6	24·1

Tables 29 and 30 show the average ages at marriage for a period of years. It will be noticed that there is a great uniformity in them, although, for maids, the average was slightly greater in 1884 than for the previous thirteen years.

As indicating the change, which of late years has been produced in the social conditions, it is interesting to note the decrease in the number of first marriages since 1881. In this year there were 1,221 more first marriages than in the previous year; in 1882, 779 more than in 1881; in 1883, 401 more than in the preceding year; while in 1884 there were 733 fewer than in 1883.

The number of second marriages, which took place during the past year, was 122 less than in the year previous.

Thirteen thousand nine hundred and seventy bachelors married maids, and 743 married widows: 1,654 widowers married maids, and 894 married widows. There were 2,614 widowers married, and 1,703 widows.

Thirty-seven and one-tenth per cent. (37·1) of the males; and 45·5 per cent. of the females were married between the ages of 20 and 25; 32·1 per cent. of the males, and 21·5 per cent. of the females, between 25 and 30; 1·8 per cent. of the males and 17·0 per cent. of the females, under 20. In 10 marriages of males and 21 of females the ages were not reported.

Six hundred and eighty-seven men and 195 women were married over 50 years old; 75 men and 3 women, over 75, and 5 men, over 80.

The percentages of first and subsequent marriages, as shown in Table 32, are quite uniform from year to year.

Certain Marriages. — As having a possible bearing upon the frequency with which divorce is granted, it is instructive to study the early age, at which, every year, certain marriages are contracted by females. In 1884, two women were married at 13 years; six at 14; 31 at 15.

One bachelor at 70 married a maid at 24, and one bachelor at 20, a female at 22, who had been twice before married. Two widowers at 80 and 83, respectively, married maids at 54 and 43, and one at 71, a maid at 28. A male at 82 married a woman at 74, being the second marriage of both. One male at 28 married for the second time a woman at the same age, who had been previously married twice. One male at 26, for the fourth time, married a maid at the same age, while one at 27 married a woman at 28, being the third time for both. A fourth marriage of a male at 31 took place to a female at 30, and a fifth marriage at 64, to a widow of 38.

* Percentages exclude marriages where the nativity was not recorded.

In Table 35 the increase in the proportions of mixed marriages since 1865 is strikingly shown, together with the decrease in those of our native population.

Table 36 shows the gradual decrease in the relative ratios of native marriages, during the last twenty years.

In Table 37 may be studied the ratios of the nativity of persons married for ten years, by counties.

DIVORCES.

There are nine statute causes, for which divorce from the bonds of matrimony may be granted in Massachusetts, as follows : —

Adultery.

Impotency.

Sentence to imprisonment at hard labor for five years or more.

Desertion for three consecutive years, next prior to the filing of the libel.

Separation without consent, refusal to cohabit, and union for three years with a religious sect or society, holding the relation of husband and wife unlawful.

Extreme cruelty.

Gross and confirmed habits of intoxication.

Cruel and abusive treatment.

Neglect to provide.

Of these causes, the one relating to union with a religious sect, holding the relation of husband and wife unlawful, is practically inoperative, since no divorces have been granted upon this ground for the past twenty-two years, at least.

Although the first statute referring to divorce was passed in 1786 — five and one-half years after the first legislature had met under the Constitution of Massachusetts — it was not until 1870 that the nine causes, mentioned above, were completed by the addition of *gross and confirmed habits of intoxication*, as a ground upon which a full divorce might be granted.

The sudden variations noticeable in the statistics of certain years, recorded in the following tables, are mostly due to changes in the laws defining the statutes.

Tables 38-51 show the total number of divorces granted for a period of twenty years, by years and statute causes. By a reference to Table 38, it may be learned that, during this period, there were 9,402 divorces decreed, of which number 6,417, or 67·8 per cent., were upon complaint of the female. The largest proportion in favor of the female (71·8 per cent.) is found in Berkshire County, and the smallest (62·2 per cent.) in Dukes and Nantucket. Of those granted for adultery, 54·8 per cent. were decreed to the wife, for desertion, 64·6 per cent., and for intoxication, 89·8 per cent.

Of the total number granted in the twenty years' period (Table 53) 3,243, or 34·5 per cent., were granted for adultery, and 4,035, or 42·9 per cent., for desertion — an aggregate of 77·4 per cent. for the two causes. This ratio is 1·2 per cent. lower than for the twenty-one years, from 1863 to 1883, mentioned in the last report.

Divorces by Counties. — During the period under discussion, viz., from 1865 to 1884, Suffolk County is credited with 25·7 per cent. of the total number of divorces, and Dukes and Nantucket with only ·6 of one per cent., these counties representing the highest and lowest proportionate extremes.

In proportion to the total number granted in each county (Table 53), 45·8 per cent. were decreed in Franklin for adultery; 38·3 per cent. in Berkshire; 36·8 per cent. in Suffolk; 36·4 per cent. in Middlesex; 35·9 per cent. in Bristol; 33·3 per cent. in Essex; 33·1 per cent. in Hampden; 32·0 in Worcester; 31·7 in Norfolk; 30·9 in Barnstable; 27·6 per cent. in Hampshire; 22·7 in Dukes and Nantucket; 20·2 per cent. in Plymouth. The ratio for the latter county is 23·6 per cent. lower than that for Franklin. It is worthy of remark that, as a rule, the counties, which contain the largest percentage of native-born inhabitants, exhibit the lowest ratios of divorce for the crime of adultery.

For desertion as a cause, the above relative order seems to be in the main reversed, as follows: — Barnstable, 62·3 per cent.; Plymouth, 56·3 per cent.; Norfolk, 51·2 per cent.; Hampshire, 51·1 per cent.; Dukes and Nantucket, 50·9 per cent.; Franklin, 42·8 per cent.; Middlesex, 41·4 per cent.;

Berkshire, 41·2 per cent.; Hampden, 40·0 per cent.; Suffolk, 38·9 per cent.

For intoxication, Hampden again exhibits the highest ratio (11·6 per cent.), and Dukes and Nantucket the lowest (·6 of one per cent.). Suffolk and Essex stand relatively second and third in order.

For extreme cruelty, Dukes and Nantucket hold the first rank, while Berkshire and Essex, with the same percentage, occupy the second position. Hampden stands third in order. For cruel and abusive treatment, Plymouth furnishes the worst record, and Essex the best. Neglect to provide is most prominent in Dukes and Nantucket, while in Barnstable and Franklin there have been no divorces granted for this cause during the twenty years. Franklin, however, exhibits the highest percentage for imprisonment. For impotency, there were seventeen cases in which the marriage contract was annulled: of this number, 5 were in Middlesex; 4 each in Suffolk and Worcester; 2 in Essex; 1 each in Bristol and Plymouth.

Dividing the State into two geographical divisions, as has been done in Table 54, it will be seen that the ratios for adultery and intoxication are slightly larger for the eastern than for the western section, while the latter takes precedence in its proportions for the remaining causes.

TABLE 54. — *Ratio of Divorces Granted for Each Cause, in two Geographical Divisions. — Twenty Years.*

Ratio of Divorces to Marriages. — The ratio of divorces to marriages for the aggregate period of twenty years is one to 33·1 for the State, as compared with one to 39·2 in 1865, and one to 38·8 in 1870. In comparison with these ratios, it is found that the marriage-rate has been diminished 3·46 per 1,000 of estimated population since 1865, and 3·06 since 1870. For the same periods, the average proportions of divorces to marriages are one to 31·6 for the former, and 26·9 for the latter. Furthermore, it is estimated that the population has increased 60·8 per cent. since 1865, and 39·8 per cent. since 1870, while the ratios of persons divorced have advanced from one in 3,804 of the population in 1865, and one in 3,845 in 1870, to one in 3,314 in 1884.

Totals,	300,604	—	9,402	1 to 33·1

* Estimated.

Table 56 shows the ratios of the total number of divorces to the total number of marriages for twenty years, by counties. It will be observed that Norfolk presents by far the smallest proportion, one to 56·8, and Dukes and Nantucket the largest, one to 25·0, or more than double that for Norfolk.

The remaining counties stand in the following relative order:—Hampshire, one to 41·5; Plymouth, one to 38·2; Franklin, one to 33·7; Barnstable, one to 33·4; Middlesex, one to 32·3; Suffolk, one to 31·6; Essex, one to 30·7; Worcester, one to 30·4; Bristol, one to 29·9; Berkshire and Hampden, one to 28·1 each. Berkshire, Bristol, Dukes and Nantucket, Essex, Hampden and Worcester exhibit ratios, which are higher than that for the State.

If these ratios are studied in reference to the different causes, as may be done in Table 57, it will be seen that Plymouth County has, for the period of twenty years, the best record for adultery, exhibiting a proportion of one divorce to 186·9 marriages, and that Berkshire, with a ratio of one to 73·5, has the worst. The relative rank of the remaining counties is as follows:—Norfolk, one to 179·3; Hampshire, one to 148·1; Dukes and Nantucket, one to 110·7; Barnstable, one to 108·4; Worcester, one to 95·0; Essex, one to 92·2; Middlesex, one to 88·7; Suffolk, one to 86·1; Hampden, one to 85·1; Bristol, one to 83·4; Franklin, one to 73·6.

For desertion, Norfolk's record of one divorce to 111·2 marriages is the best, while that for Barnstable — one to 49·2 — is the worst. On the contrary, Barnstable exhibits the smallest ratio for intoxication and for all causes combined, having had no divorces granted for cruel and abusive treatment, neglect to provide, imprisonment nor impotency for twenty years. The ratio for intoxication is also very small for Franklin, while it seems singular that the proportionate number of divorces, granted for this cause, should be the largest in Hampden. For extreme cruelty, Norfolk again makes the best showing, while Dukes and Nantucket exhibit the highest ratio. Of the counties, which exhibit returns for all the other causes combined, Franklin makes the best showing, and Norfolk the worst — the ratio for the latter being more than five times greater than that for the former.

In computing the ratios of divorces to marriages for the two geographical divisions (Table 58), it is found that for all the causes combined, as well as for adultery, desertion, extreme cruelty, and all other causes, tabulated separately, the proportion is larger in the western than in the eastern section.

The following three tables show the statistics of divorces for 1884, separately. In this year 614 divorces were granted, which number is 41 less than in 1883, but 144 more than the yearly average for the past twenty years, and 81 more than the mean for the period since 1870. Of the above number, 26·5 per cent. were decreed for adultery, as compared with 23·9 per cent. in the previous year; 45·3 per cent. for desertion, as against 49·0 per cent. in 1883; 12·9 per cent. for intoxication (12·7 per cent. in 1883); 3·6 per cent. for extreme cruelty; 9·5 per cent. for cruel and abusive treatment; 1·4 per cent. for neglect to provide; ·6 of one per cent. for imprisonment; ·2 of one per cent. for impotency. For adultery, the ratio is 8·5 per cent. lower than that for the past twenty years; for desertion, 3·4 per cent. higher; for intoxication, 3·8 per cent. higher; for extreme cruelty, 1·7 per cent. lower; for cruel and abusive treatment, 4·3 per cent. higher.

Sixty-six and eight-tenths per cent. of the total number were granted on complaint of the wife, as against 70·4 per cent. in 1883, and 67·8 per cent. as the ratio for twenty years. With the exception of 1875, a larger number was granted to males in 1884 than in any year since 1865. Of those in which desertion appeared as a cause, 60·4 per cent. of the libellants were women, and of those in which intoxication was alleged, 86·0 per cent. These ratios differ but little from the percentages for twenty years.

The relative rank of the various counties, in the number of divorces granted in each, varies somewhat from the position which they held in the previous two years. Suffolk stands first in order for the three years; Middlesex first in 1884, and fourth in both 1882 and 1883; Worcester third in 1884, and second in the two years just preceding; Essex fourth in 1884, third in 1883, and second in 1882; Hampden fifth in 1884, having risen from the sixth and seventh places respectively in the previous years; Bristol sixth, as compared with the fifth position in 1882 and 1883; Norfolk seventh; Berkshire eighth; Plymouth ninth; Barnstable and Franklin tenth; Hampshire twelfth; Dukes and Nantucket thirteenth, which was also their rank in the previous two years.

In proportion to the total numbers granted in each county

(Table 60), it is found that Franklin has the highest ratio for adultery (60·0 per cent.), and Plymouth the lowest (6·7 per cent.). The order of the remaining counties, with their ratios, is as follows: — Essex, 34·1 per cent.; Dukes and Nantucket, 33·4 per cent.; Suffolk, 28·9 per cent.; Middlesex, 27·0 per cent.; Worcester, 26·7 per cent.; Norfolk, 22·7 per cent.; Bristol and Hampshire, 22·2 per cent. each; Barnstable, 20·0 per cent.; Hampden, 19·7 per cent.; Berkshire, 10·5 per cent. Of those decreed for desertion, Plymouth takes the first place, with a ratio of 66·7 per cent., and Dukes and Nantucket the last position, with a percentage of 33·3. The remaining counties assume the following order: — Barnstable, Norfolk, Hampshire, Hampden, Worcester, Berkshire, Essex, Bristol, Middlesex, Franklin, Suffolk, Dukes and Nantucket.

For intoxication, Bristol exhibits the worst record, and, with the exception of Barnstable, Franklin and Hampshire, in which counties no divorces were granted for this cause, Franklin makes the best showing. In Berkshire, Essex, Norfolk and Worcester, only, are the ratios lower than the proportion for the State. For extreme cruelty, the ratio for Barnstable is disproportionately larger, in proportion with those for the other counties.

In none of the counties were all the causes represented.

Of the 655 suits for divorce which were disposed of in 1884, 566, or 86·4 per cent., were not contested. Eighty-one and seven-tenths per cent. (81·7 per cent.) of the petitions for legal separation on the ground of adultery, were decided without contest; 86·4 per cent. of the suits brought for desertion; 87·0 per cent. of those for intoxication; 95·9 per cent. for extreme cruelty; 81·9 for cruel and abusive treatment; 100 per cent. each for imprisonment, neglect to provide and impotency. Of the whole number of petitions, 92·5 per cent. were granted: — 93·1 per cent. for adultery; 92·0 per cent. for desertion; 93·0 per cent. for intoxication; 88·0 per cent. for extreme cruelty; 95·0 per cent. for cruel and abusive treatment; 81·8 per cent. for neglect to provide. All suits for imprisonment and impotency, as causes, were decided in favor of the libellants.

Two hundred and forty-six libels were dismissed. Of this number 19·1 per cent. were without prejudice; 29·2 per cent.

by agreement or request of the libellant; 30·2 per cent. for want of prosecution; 2·4 per cent. on account of the death of one of the parties to the suit; 19·1 per cent. for other causes and causes not stated.

One divorce was granted for nullity of marriage, and in five cases the district attorney was notified to make complaint, in accordance with the acts of 1881.

Of the eight causes, for which divorces have been granted during the past twenty years, Bristol, Essex, Middlesex, Plymouth, Suffolk and Worcester furnish statistics referable to each of them; Berkshire, Hampden and Norfolk to seven; Dukes and Nantucket, Franklin and Hampshire to six; Barnstable to four.

Studying the statistics for each year of the above period, it is found that, in 1884, a larger number of divorces were granted in Hampden and Norfolk than in any year since 1865, and in Middlesex also, with the exception of 1874. In the former county, the past year took precedence in the number of decrees for desertion and intoxication, in Norfolk for adultery, desertion and cruel and abusive treatment, and in Middlesex for intoxication, if 1874 and 1875 are excepted. Plymouth furnished, in 1884, the largest number of divorces granted to husbands for desertion, also Berkshire, excepting in 1873 and 1875, and Worcester, excepting in 1875 and 1879. For the first time in the period under discussion, one divorce was granted in Worcester County, during the past year, to the husband for cruel and abusive treatment. For the number of divorces decreed for adultery, the year 1866 is the most prominent in the largest proportion of the counties; 1878, for desertion; 1876, for intoxication; 1876 and 1877, for extreme cruelty.

Barnstable, Middlesex, Norfolk and Suffolk had in 1874 the largest number of divorces, which had been granted in these counties for twenty years; Essex, in 1877; Plymouth, in 1878; Franklin, in 1881; Berkshire, Bristol, Dukes and Nantucket and Worcester, in 1883; Hampden and Norfolk, in 1884.

Table 61 shows the ratio of divorces to marriages, for 1884. It will be observed that the proportion for the State is one divorce to 28·2 marriages, as compared with one to 27·7 in 1883, one to 34·3 in 1882, and one to 33·1 as the total proportion for the past twenty years. The highest ratio is exhibited in Hampden County (one to 18·6), and the lowest in Plymouth (one to 47·8), a difference of one to 29·2 in favor of the latter. The proportions for the remaining counties are as follows:— Hampshire, one to 41·3; Bristol, one to 35·2; Norfolk, one to 33·8; Middlesex, one to 30·6; Franklin, one to 29·0; Suffolk, one to 28·2; Berkshire, one to 28·1; Barnstable, one to 26·5; Worcester, one to 22·8; Dukes and Nantucket, one to 19·3.

TABLE 61. — *Ratio of Divorces to Marriages. by Counties. — 1884.*

Worcester,	1,959	86	1 to 22·8
The State,	17,333	614	1 to 28·2

Length of Married Life of Libellants.—As exhibited in Table 62, the average length of the married life of all libellants in 1884, was 11·70 years, a slightly longer period than was recorded in the previous two years. In the suits brought on the ground of imprisonment, married life had continued, as an average, 13·0 years, while for neglect to provide, as an alleged cause, the libellants had been married but 7·82 years, and for adultery 9·16 years. Forty-one per cent. of the marriages had lasted between ten and twenty years, and 29·9 per cent. between five and ten years, as compared with 39·8 per cent. and 33·8 per cent. for the respective periods, in 1883. One hundred and two of the libellants had been married between one and five years, 65, between twenty and thirty years, 22, over thirty years, 3, under one year, and one, under six months. Of the suits brought on the ground of adultery, 40·5 per cent. were filed after a married life of between ten and twenty years, and 30·4 per cent. after marriage had continued between five and ten years. In 40 cases of alleged adultery, the libellants had been married between one and five years, in 7, between twenty and thirty, in 3, under one year, and in one, over thirty years. Of the suits in which desertion was alleged as a cause, 37·7 per cent. of the libellants had been married between ten and twenty years, and 31·4 per cent. between five and ten years. In the libels for intoxication, 50·5 per cent. were filed after a married life of between ten and twenty years, and 25·8 per cent. after one of between five and ten years. Of the 22 cases, in which the married life had lasted over thirty years, 16, or 72·7 per cent. were for desertion.

Taking the whole period between 1879 and 1884, six years, into consideration, it appears that 36·7 per cent. of the petitioners had been married between ten and twenty years, and 33·7 per cent. between five and ten years. A total of 631 had been married from one to five years; 410, from twenty to thirty years; 125, over thirty years; 26, under one year; 23, under six months. In nine of the suits, the length of the married life was not recorded.

DEATHS.

Thirty-six thousand nine hundred and ninety deaths were reported in 1884, a decrease of 758 in comparison with the statistics for 1883, and an increase of but 5 over the average for the past four years. This indicates a decrease in the mortality of 2·0 per cent., as against an estimated increase in the population of 2·6 per cent.

The death-rate per 1,000 of the estimated living population (18·15) is ·86 lower than it was the preceding year, ·99 less than in 1882, and ·80 below the average for the four years since 1880. It is likewise 1·06 lower than the average for the five years, and 1·11 less than the mean for the thirty years, previous to 1881. With the exception of 1852, 1856, 1859, 1866, and 1867, it has been exceeded in every year since 1851. (Table 63.)

Taking into consideration the facts, that 1,330 more births took place in 1884 than in 1883, that the rate of mortality among infants under one year of age was slightly less than the average for thirteen years, although higher than in any year since 1877 (Table 73), and finally that the percentage of deaths from the zymotic diseases was 3·4 lower than the mean for ten years, and, with the exception of 1883, the smallest since 1872 (Table 80), the health of the community, during the past year, must be considered to have been above the average.

In Table 64, which records the death-rates and deaths by counties, for a period of years, it will be seen that in Bristol there was an increase of 176 in the number of deaths, in 1884, over the statistics for the previous year, and in Berkshire, an increase of 12. All the remaining counties show a decrease, more or less marked.

TABLE 65. — *Death-Rates and Deaths in Six Geographical Divisions.**

COUNTIES.	Population. 1880.	Average Death-Rate. 1860-65.	Average Death-Rate. 1870-75.	Death-Rate. 1880.	Deaths. 1880.	Deaths. 1881.	Deaths. 1882.	Deaths. 1883.	Deaths. 1884.
1. Metropolitan (City of Boston, the greater part of Suffolk County),	362,839	24.1	25.2	23.7	8,594	9,075	8,999	9,716	9,605
2. North-eastern (Essex, part of Suffolk and part of Middlesex County),	556,883	19.2	19.6	19.2	10,717	10,942	11,146	11,445	11,120
3. South-eastern (Dukes and Nantucket, Barnstable, Plymouth, Bristol and Norfolk),	349,489	18.1	17.9	18.8	6,562	6,761	7,051	6,687	6,772
4. Midland (Worcester and part of Middlesex),	257,467	19.1	18.1	18.6	4,785	4,709	4,781	4,932	4,692
5. Valley (Franklin, Hampden and Hampshire),	187,375	18.3	19.2	18.7	3,504	3,666	3,566	3,691	3,512
6. Western (Berkshire),	69,032	16.2	17.1	16.4	1,130	1,305	1,242	1,277	1,289
Whole State,	1,783,085	19.6	19.9	19.8	35,292	36,458	36,785	37,748	36,990

* Chelsea, Revere, and Winthrop, of Suffolk County, are in the *North-eastern Division*. Ashby, Townsend, Pepperell, Shirley, Groton, Dunstable, Tyngsborough, Westford, Littleton, Boxborough, Acton, Stow, Marlborough, and Hopkinton, of Middlesex County, are in the *Middlesex Division*; the rest of Middlesex County is in the *North-eastern Division*.

As compared with the average for five years, the Midland and the Valley divisions alone exhibit a decrease in the number of the deaths, which took place in 1884.

TABLE 66. — *Death-Rates and Deaths according to Population.*

Table 66 shows the deaths and death-rates, as affected by the density of population. The most noticeable fact is the great decrease in the number of deaths in towns of less than 1,000 population. This may be partially accounted for by the decrease in the number of inhabitants, which is indicated by the returns from the census of 1885, already published.

Seasons. — The percentage of deaths in each quarter is quite uniform from year to year, that for 1884 forming no exception to the rule, although the ratio for the fourth quarter is slightly in excess of the average for the past fourteen years. The largest number of deaths occurred in August and in the third quarter; the smallest, in May and in the second quarter.

Sex.—One hundred and forty-nine more females died in 1884 than males—an excess, which is but eight less than the average since 1852, leaving out the period most influenced by the war. In five of the deaths there was a failure to return the sex.

The proportion of male deaths to those of females was 99·2, which difference is partially accounted for by the fact that, by the census of 1880, there were 107·7 females living to every one hundred males. This excess undoubtedly exists at the present time.

Six hundred and sixty more males than females died under one year of age, or a percentage difference of 3·74, while under the age of five this difference amounted to 4·08 per cent.

Between the ages of twenty and thirty, however, the excess of female deaths over those of males was 1·56 per cent., and for all other ages 4·40 per cent. Twenty and ninety-one hundredths per cent. (20·91) of the whole number of deaths occurred under one year of age, and 32·33 per cent. under five. (Table 70.) These proportions correspond very closely to those for a period of years, although the ratio for children under five is slightly below the average. (Tables 71 and 72.)

But little practical knowledge can be obtained from the records of the average ages at death, as shown in Table 75, since the statistics are materially influenced by the tendency of the young to emigrate, especially from the country districts.

The number of centenarians, who died in 1884, was smaller than usual.

* Including those whose nativity was not recorded. In the calculations of percentages, the ratios are not given to the *total* reported deaths, but only to the total of those cases where the nativity was stated.

CAUSES OF DEATH.

Of the 36,990 deaths which were registered in 1884, in 535 only, or 1·4 per cent., was there a failure to return the causes. This ratio is ·4 of one per cent. lower than in 1883, ·7 of one per cent. lower than in 1880, 1·7 lower than in 1876, and 3·2 per cent. lower than in 1871. These differences, although slight, sufficiently attest the increasing accuracy of the records. The most complete returns (Table 79) were as usual from Suffolk County, while Franklin and Berkshire, as was the case in 1883, appear to have been the most negligent.

Of the 535 unspecified deaths, 108 were from hemorrhage, 68 from tumor, 28 from inflammation, and 320 in which absolutely no cause was assigned.

Table 79 exhibits a classification of deaths, by counties. It will be observed that, in the *zymotic class* Berkshire has the highest ratio, 27·1 per cent., which ratio, as well as those for Hampden, Suffolk and Bristol, is above the percentage for the State. Barnstable has the lowest proportion, and one which is 17·1 per cent. below that for Berkshire. As compared with the statistics of 1875, it is shown that the largest decrease in the ratios of zymotic diseases has been in Plymouth — 10·1 per cent., and the smallest in Berkshire — 1 per cent., if Dukes and Nantucket, in which there has been an increase of 3·7 per cent., are excepted. The decrease in the proportions for the remaining counties is as follows: — Essex, 8·9 per cent.; Middlesex, 8·3 per cent.; Suffolk, 8·2 per cent.; Norfolk, 7·2 per cent.; Franklin, 7·1 per cent.; Hampshire, 7·1 per cent.; Barnstable, 6·9 per cent.; Worcester, 4·8 per cent.; Hampden, 3·9 per cent.; Bristol, 3·1 per cent.

In the *constitutional class*, Barnstable again returns the largest proportionate number of deaths, with Plymouth and Essex second and third respectively. The lowest ratio is found in Berkshire. In Hampden, Hampshire, Middlesex and Suffolk,

there has been an increase in ratios, more or less marked, over those for 1875. From *local causes*, there were relatively more deaths in Barnstable, and fewer in Berkshire, than in the remaining counties, although the difference between them is not marked. Dukes and Nantucket occupy the first rank in the *developmental division*, and Essex in the number of deaths from *violence*. This corresponds with the record for 1883.

Average,	24·5	24·3	36·1	10·7	4·1

* Excluding deaths from unspecified causes and still-births.

Although the ratio of deaths from the *zymotic diseases*, in 1884, was a small fraction of one per cent. greater than in 1883, yet, with this exception, it was the smallest for any year since 1872, and 3·4 per cent. lower than the average for the past ten years.

In the *constitutional class*, the proportion was the same as in the preceding year, and very slightly below the ten years mean. The percentage of deaths from the *local diseases*, however, was the highest, with the exception of 1883, for thirteen years, and 3·1 per cent. above the average for ten years. The *developmental* and *violent classes* show ratios very near the average.

1884, .	254	875	410	562	1,084	75	627	2,081	3	5,971

Table 81 shows the mortality from the nine most prominent zymotic diseases, for the past ten years. As a whole, these affections were more fatal by 175 deaths than in 1883, but by 774 less than the yearly average.

Typhoid fever caused 15 more deaths than in the previous year, although the mortality was 8 below the ten years' mean. The statistics for 1877, 1878, 1879 and 1883 exhibit a more favorable record in the fatality of this disease.

The most striking increase in the number of deaths is observed in whooping-cough, which disease had a far greater mortality, in 1884, than in any of the ten years, and was more fatal, by 134 deaths, than the average for the above period.

Croup, although exhibiting 32 more deaths than in the preceding year, yet caused a smaller mortality than is indicated by the ten years' average.

From diphtheria, there were fewer deaths than in any year since 1875, and 620 less than the mean.

Scarlatina was more fatal than at any time since 1877, with

the exception of 1879, but somewhat less so than the mean for the ten years under discussion. In 1875 and 1876, the mortality from this disease was unusually excessive.

From measles, the number of deaths was 246 less than in the preceding year, and the smallest with the exception of 1876, 1879 and 1882, since 1875.

The mortality from dysentery was less than in any of the past ten years, while that from cholera infantum was 140 greater than in 1883, and 111 larger than the average for the ten years.

The fatality of small-pox was very slight, three deaths only having occurred from this disease — a smaller mortality than in any year, with the exception of 1878, which recorded two deaths, since 1872.

1882, .	706	1,047	153	676	2,025	867	102	2,932	307	571
1883, .	784	1,056	183	745	2,153	934	104	3,045	339	582
1884, .	857	1,119	166	744	2,117	949	65	2,646	307	619

Consumption, the most prominent disease of the *constitutional class*, caused 5,798 deaths in 1884, as compared with 5,931 in 1883, 5,865 in 1882, and 5,886 in 1881. Although, numerically, the deaths from consumption were 800 more than the average for the past ten years, yet it is gratifying to observe, that the mortality was the smallest since 1881, and still more so, that its mortality-rate is steadily decreasing. From 1857 to 1880 the rate per 10,000 diminished nearly twenty-five per cent., while since the latter year the approximate diminution has been eight per cent.

As satisfactory as the statistics of mortality from consumption are, much less so are those from cancer — the remaining leading disease of the constitutional class. One thousand and sixty deaths occurred from the latter affection in 1884, as compared with 1,026, 987, 949, 928, 862, 807, 646, 657, 593, and 585 in the previous ten years. This number is 209 more than the average for the period since 1875, and represents an increase in rate, per 10,000, of nearly one hundred per cent. during the last twenty years.

Of the deaths from *local* causes, those from the disorders of the brain and nervous system have made a very marked advance in the last ten years. From apoplexy, paralysis, insanity, and convulsions, the increase has been almost unbroken since 1875 (Table 84), — the mortality from these diseases, in 1884, having been 203, 160, 25 and 131 greater, respectively, than the average for the above period.

The number of deaths from heart disease has been surpassed but once (in 1883) since 1872, and indicates a steadily increasing fatality. From bronchitis, the mortality was greater in 1884 than in any of the past ten years, and, with the exception of 1881, the same is true of Bright's disease.

Pneumonia was less fatal, by 399 deaths, than in 1883, and, by 38, than the mean for ten years. Pleurisy, likewise, exhibited in its statistics of death, a very marked improvement over the record for the above period.

In the *developmental class*, the number of deaths from old age, although less than in the previous year, was, nevertheless, 194 greater than the ten years' mean; that of infants, both before and immediately after birth, was 339 over this average.

The mortality from childbirth has steadily diminished since

1875, — that in 1884 having been exceptionally low. Together with the deaths from abortion and puerperal convulsions, the accidents of pregnancy and labor, already mentioned, were less fatal, by 69 deaths, than the average for ten years. Adding the number of deaths from puerperal fever (111) to the sum of the fatal accidents mentioned above, the result gives, as a proportion, one death in every 176·7 labors, as against one in 145·4 in 1883, one in 160·5 in 1882, and one in 136·6 in 1881.

1884, . . .	112	39	186	426	3	34	11	184	995

The total mortality from the principal *violent causes* was the most excessive for ten years, the increase being the most marked in the number of deaths from railroad accidents, and from suicide. From the former cause, the fatality has gradually increased from 102 in 1875 to 186 in 1884, while, from the latter, the advance is 31 over the average for ten years. One death from suicide, between 10 and 15 years of age, was recorded. Freezing was slightly less destructive, and heat somewhat more fatal, in its effects, than the above mean. The number of deaths from burns and scalds was the largest, with the exception of 1875, in any year of the last ten. There were 11 deaths from homicide; 1 from murder; 97 from suffocation; 39 from poison; 15 from strangulation; 6 from exposure; 1 from drinking cold water. Three persons died from the effects of lightning, and two from the administration of chloroform.

Apoplexy,	857	12	12	12	12	11	11	12	13	14	15

Of the twelve most prominent causes of death, during the past ten years, as shown in Table 85, consumption stands first in order each year, and pneumonia second, with the exception of 1876 and 1877, when it ranked third. Heart diseases occupied the third position in 1884, as it likewise did in 1881 and 1883, although its average rank for the ten years is 4.5.

Cholera infantum fell from the third place in 1875 to the sixth in 1879, then rose to the third rank in 1882, but again declined to the fifth position in 1883, and advanced one grade in 1884. Old age occupies very nearly the same relative rank in each year.

Paralysis, ranking ninth in 1875 and 1876, and seventh from 1877 to 1880, fell again to the ninth place in 1881, but advanced to the sixth — the highest position of the decade — in 1884.

Cephalitis stood seventh in 1883 and 1884, but tenth in 1875, 1877 and 1879. In 1876 its order was twelfth.

Diphtheria fell to its lowest rank for ten years in 1884 — its position being the eighth, as compared with the sixth place in 1881, 1882 and 1883, fifth in 1880, and second in 1877 and 1878.

Cancer occupied the ninth rank in 1884 — a position similar to that in 1883 — having risen through several variations from the fourteenth place in 1875.

Bronchitis has risen from the nineteenth in order in 1875 to the tenth in 1884.

Typhoid fever, standing eleventh in 1884, and twelfth in 1883, fell from the seventh position in 1881 and 1882, having advanced in the latter years from the tenth rank in 1878 and 1880, and the thirteenth in 1879. In 1875, 1876 and 1877 it occupied the eighth place.

Apoplexy stood twelfth in 1878, 1881, 1882, 1883 and 1884, eleventh in 1879 and 1880, and fifteenth, fourteenth and thirteenth in 1875, 1876 and 1877 respectively.

The twelve leading causes of death represent 58.85 per cent. of the total mortality for 1884, in comparison with 55.47 per cent. in 1883, 59.8 per cent. in 1882 and 1880, and 59.98 per cent. in 1881.

The other leading causes of death in order were as follows:

Debility, 834; tabes mesenterica, 786; convulsions, 744; scarlatina, 627; Bright's disease, 619; croup, 562; enteritis,

549 ; diarrhœa, 522 ; hydrocephalus, 445 ; drowned and lost at sea, 426 ; whooping-cough, 410 ; casualty, 391 ; peritonitis, 307 ; brain diseases, 280 ; enteritis, 275 ; liver diseases, 265 ; dysentery, 254 ; dropsy, 234.

In proportion to the total mortality, consumption assumed the first rank, in 1884, in all the counties, except in Dukes and Nantucket, old age in the latter instance taking precedence. In the second position, no one disease is very prominent, while in the third, heart disease appears the most frequently. Cholera infantum is rather more noticeable in the fifth place than the other diseases mentioned. (Table 86.)

* Still-births and deaths from unspecified causes excluded.

Under the age of five, as will be seen by a reference to Table 87, cholera infantum and pneumonia stand relatively first and second in rank, as was the case in 1882 and 1883. After these come debility, convulsions and cephalitis in order — vague terms, which convey but little information as to the true causes of death.

Between five and ten, diphtheria and scarlet fever take precedence, as they likewise did in 1883. Cephalitis occupies the third place, a rank similar to the record of the previous year, while croup and pneumonia stand in an order, which is the reverse of that in 1883.

From fifteen to sixty, consumption is the most prominent disease, reaching, as usual, its highest mortality from twenty to thirty, between which ages it causes very nearly one-half of all the deaths.

Typhoid fever becomes the second cause of death between fifteen and thirty, and fourth between thirty and forty.

From thirty to fifty, pneumonia ranks second, third between twenty and thirty, and fifty and sixty, and fourth between seventy and eighty.

Heart disease is third in fatality between thirty and fifty, and in those over eighty years of age, and fourth between ten and fifteen.

Cancer holds the fourth position between forty and seventy, while, for nearly all ages, diseases referable to the brain and nervous system occupy the fifth place — the most prominent of these being apoplexy.

The relative rank of the disorders, mentioned in the table, varies but little from year to year.

Brain Diseases. — Three thousand six hundred and sixty-nine deaths occurred from diseases of the brain in 1884 — 1,869 males and 1,800 females, which is a sex difference of 69 only, as compared with 128 in the previous year. Of this number, 553 males and 566 females died from paralysis; 577 males and 534 females from cephalitis; 433 males and 424 females from apoplexy; 81 males and 85 females from insanity; 82 males and 54 females from softening of the brain; 143 males and 137 females from unspecified diseases.

From apoplexy and paralysis taken together, 594 deaths occurred between 70 and 80; 355 between 60 and 70; 321 over 80; 254 between 50 and 60; 185 between 40 and 50; 92 between 30 and 40; 64 below 30; 15 under 5. The largest increase over 1883 was between the ages of 70 and 80, and 40 and 50.

By a further study of Tables 92 and 93, one cannot avoid being impressed with the steady advance which has been made in the mortality from these diseases during the last twenty-five years — an advance equal to 50·2 per cent. over the average for this period. As compared with the record in 1860, that for 1884 shows an increase of 164·4 per cent. in the number of such deaths, as against a similar increase of 156·9 per cent. in 1883. In the same period the population is estimated to have advanced 63·6 per cent.

Apoplexy has advanced in fatality, during the twenty-five years under discussion, 260 per cent., as compared with 229·4 per cent. in 1883, paralysis 178·3 (162·6 per cent. in the previous year), and insanity 133·9 per cent.

It thus appears certain that the fatality of brain diseases is increasing rapidly from year to year. Whether this increase is due to overpressure in work, to overpressure in recreation, or to a combination of both of these hygienic errors is a discussion, with which a report of this nature has nothing to do. Most assuredly, however, the startling results demand very serious consideration.

Bright's Disease. — Six hundred and nineteen deaths occurred from this affection in 1884 (Table 94), the largest number in fifteen years. With the exception of 1875, when the mortality was six less than in the preceding year, there has been an unbroken advance in the number of deaths since 1870. As compared with the statistics for the latter year, it is found that the increase equals 342·1 per cent., and as against the average for fifteen years, 64·6 per cent.

In Barnstable, Norfolk and Suffolk Counties the mortality was the same as in 1883, while in Hampshire, Middlesex and Worcester it was smaller. The most marked increase over the record of the previous year was in Franklin and Hampden.

Table 95 shows the yearly death-rates from Bright's disease for ten years.

In relation to the total mortality in each county during the last ten years, it will be seen, by Table 96, that Norfolk, Plymouth and Suffolk exhibit average ratios above that for the State. For 1884, Berkshire, Bristol, Dukes and Nantucket, Franklin, Hampshire, Plymouth and Suffolk have also percentages above the State's proportion.

Seasons and Sex. — The largest number of deaths took place in January and the first quarter, as compared with July and the third quarter in 1883. For a period of ten years previous to 1884, the highest mortality occurred in August and in the third quarter. Of the total number of deaths from Bright's disease which were recorded in 1884, 54.75 per cent. occurred in the first half of the year, and 45.24 per cent. in the second half, thereby differing from the ten years above mentioned, which furnished, as statistics, 50.09 per cent. and 49.91 per cent. for the two periods, respectively. Fifty-seven and two-tenths per cent. (57.2) of the decedents in the past year were males, as compared with 57.1 per cent. in 1883, and 58.4 per cent. in the ten years period.

By a study of Table 98, it will be learned that 22.13 per cent. of the total mortality occurred between the ages of 60 and 70; 16.48 per cent. between 70 and 80; 15.83 per cent. between 50 and 60; 14.38 per cent. between 30 and 40; 11.79 per cent. between 40 and 50; 2.91 per cent. over 80. It thus appears that the disease is more fatal in advanced life — a theory which is substantiated by the statistics for a term of years. The percentage of deaths, however, which took place in 1884 between 30 and 40 years of age is worthy of note. The proportion of male deaths to those of females differs but little from year to year. For all ages the ratio for 1884 was 133.6 males to every one hundred females, and in 1883, 132.8. In the former year, however, fewer males than females died between 20 and 50 — statistics which are at variance with those for the period of eleven years, mentioned in Table 99. The ratio of male deaths for the past eleven years is 133.3 to every hundred deaths of females.

Cancer. — Of the 1,060 deaths from cancer, 706, including 86 from cancer of the uterus, occurred in females, or 155 more than the aggregate for both sexes in 1871.

In proportion to the total mortality in each county, the percentage is the highest in Barnstable, and next in Dukes and Nantucket, while Bristol shows the lowest ratio.

TABLE 101. — *Mortality from Cholera Infantum — Ten Years.*

YEARS.	Deaths from Cholera Infantum.	Death-Rate per 10,000 of Population.	YEARS.	Deaths from Cholera Infantum.	Death-Rate per 10,000 of Population.
1875, . .	2,606	15.77	1881, . .	1,861	—
1876, . .	2,087	12.63	1882, . .	2,159	—
1877, . .	1,927	11.63	1883, . .	1,941	—
1878, . .	1,573	9.44	1884, . .	2,081	—
1879, . .	1,349	7.86			
1880, . .	2,118	11.31	Average, .	1,970	—

Cholera infantum caused 2,081 deaths (1,103 males and 978 females), as compared with 1,944 in 1883, 2,159 in 1882, and 1,970, as the average for ten years. This indicates a rate of 9.7 per 10,000 of the estimated population, which is identical with the rate for 1883, and 1.5 less than that for 1882. Seven hundred and sixteen of the deaths occurred in August, 568 in September, 515 in July, 142 in October, 61 in June, 21 in November, 12 in May, 11 in December, 10 in both February and March, 9 in April, 6 in January. Eighty-six and four-tenths per cent. (86.4) of the total mortality took place in July, August and September.

TABLE 102. — *Diarrhœal Diseases, 1875-1884.*

1876, . . .	335	417	2,087	91	357	3,287
1877, . . .	343	580	1,927	60	395	3,305
1878, . . .	365	602	1,573	68	388	2,996
1879, . . .	370	372	1,349	77	392	2,560
1880, . . .	480	395	2,118	116	492	3,601
1881, . . .	458	360	1,861	68	456	3,203
1882, . . .	488	398	2,159	136	528	3,709
1883, . . .	516	336	1,941	84	523	3,400
1884, . . .	522	254	2,081	108	549	3,514

The different diarrhœal diseases classed together, as has been done in Table 102, caused 114 more deaths than in 1883, and 165 more than the mean for the past ten years. They formed 9·5 per cent. of the total mortality for the year, or ·5 of one per cent. greater than in the preceding year, but ·6 of one per cent. lower than in 1882, and ·7 of one per cent. less than in 1880. As compared with 1881, the ratio was ·7 of one per cent. higher.

Diarrhœa caused more deaths in 1884 than in any year of the decade—the same being true of enteritis—while the mortality from dysentery was the smallest in ten years.

By a reference to Table 103, in which is shown the relation between the meteorological changes and the diarrhœal diseases, it will be observed that the highest annual rate of mortality, in the third or summer quarter, occurred in 1882, and the next highest in 1880. In 1884 this rate was the lowest, with the exception of that in 1879, for the past six years. In the former two years, the mean temperature for the quarter was higher than in the corresponding quarter of the remaining years, the ranges also having been the greatest in 1880. The mean temperature during the past year was lower than in any

year, excepting 1879 and 1883, while the thermometrical ranges were the highest since 1880.

The mean of the barometer was the greatest in 1882, and the next in 1880 — that for 1884 being fourth in relative order, and in barometrical ranges the lowest. The greatest mean humidity was recorded in the past year, and the smallest in 1882, while in the latter year also there was the largest mean rain-fall in inches. The addition of the record of another year to the table, computed in the previous report, would seem to confirm the theory, that the diarrhoeal diseases increase in a ratio, corresponding to an elevation in the temperature and rise in the barometer, together with a decrease in the humidity of the atmosphere. This latter element appears to have been very prominent in its effects, during the year under discussion.

Essex,	810	Worcester,	620
Franklin,	99		
Hampden,	317	The State,	5,798
Hampshire,	121		

Consumption. — Five thousand seven hundred and ninety-eight (5,798) deaths occurred from this disease in 1884, of which number, 2,640 were of males and 3,158 of females. This is equivalent to an estimated rate of 2·84 per thousand, or ·15 less than in the previous year, ·17 less than in 1882, ·41 less than in 1881, ·24 less than in 1880, and much less than in any previous year.

In comparison with former years, it appears that the mortality was smaller by 133 deaths than in 1883, but by 193 deaths greater than the average for the past ten years. In proportion, however, to the total mortality (Table 105) there was a decrease, in 1884, of ·55 of one per cent. below the average ratio for the ten years' period. Plymouth County shows the highest ratio to its total mortality, and Berkshire, as usual, the lowest; while Barnstable, Essex and Middlesex stand relatively very high.

In furtherance of the investigation, which was commenced in a preceding report, Tables 106 and 107 have been computed, to show approximately the relation between the mortality from consumption and the nativity of the population. As was shown last year, the percentage for the State of the native-born population was, by the United States census of 1880, 50·61, while the percentage of native deaths from consumption in 1884 was 68·31. The rate of mortality per 1,000, among the native-born inhabitants was 4·37, as compared with 2·31 among those of foreign parentage, whereas, for 1883, these rates were 4·31 and 2·56 respectively. It will be thus seen that this disease is far more fatal among the purely native population.

In studying the statistics for the various counties, it will be observed that Suffolk, while it stands the lowest in rank in its proportion of native-born population (37·71 per cent.), occupied, both in 1883 and 1884, the first position in its native death-rate (Table 107), and that Dukes and Nantucket, with the largest percentage of native-born population, was twelfth in rank in 1884 and eighth in 1883, in its ratio of native mortality.

Hampden exhibits a ratio, which is twelfth in native population, and fifth in the mortality rate of this population; Middlesex, eleventh and second in comparison; Bristol, tenth and sixth; Worcester, ninth and seventh; Berkshire, eighth and thirteenth; Essex, seventh and fourth; Norfolk, sixth and third; Hampshire, fifth and tenth; Franklin, fourth and eleventh; Plymouth, third and eighth; Barnstable, second and ninth.

With reference to the relative rank of the counties, in their proportionate percentages of mortality for the native-born population, as compared with the foreign-born, it is found that Berkshire, Hampden, Middlesex, Norfolk and Worcester occupy higher positions, in native mortality, than they hold in native population. On the contrary, Bristol and Hampshire show ratios, which are relatively lower than those for the number of their native-born inhabitants.

Computing the death-rate for the foreign-born population, it appears that Suffolk takes the same rank as in the percentage for this population, and that Berkshire stands sixth in order of the latter, and thirteenth in that of the former. The greatest

variance is in Norfolk, which, ranking eighth in its ratio of foreign inhabitants, holds the eleventh place in their mortality rate. For the native population its relative rank is sixth, and in its mortality second.

* Mixed parentage is excluded.

Table 108 shows the mortality, by sex and age, for 1884. This differs but little, in the relative proportions between the different periods of life, from the aggregate record of the ten years previous. Sixty-three and twenty-two hundredths per cent. of the total number of deaths occurred between twenty and fifty years, and of this ratio, 30·53 per cent. took place between 20 and 30. For all ages, the deaths of males were in the proportion of 83·5 to every one hundred deaths of females, a proportion which is 2·8 more to one hundred than for the preceding ten years. In 1884 the mortality among females was in excess for all periods of life, except that between 60 and 80. Under five, the proportion was 71·3 to one hundred, as compared with 103·8 to one hundred for the decade.

TABLE 110. — *Deaths from Diphtheria and Croup, by Counties, 1884.*

COUNTIES.	Deaths from Diphtheria and Croup, 1884.	COUNTIES.	Deaths from Diphtheria and Croup, 1884.
Barnstable,	7	Hampshire,	27
Berkshire,	141	Middlesex,	246
Bristol,	164	Norfolk,	60
Dukes and Nantucket, .	9	Plymouth,	16
Essex,	156	Suffolk,	408
Franklin,	12	Worcester,	196
Hampden,	104	The State,	1,646

Diphtheria and Croup, taken together, caused 1,646 deaths in 1884, as compared with 1,621 in 1883, 1,771 in 1882, 2,383 in 1881 and 2,394 in 1880. With reference to the different counties, the largest ratio of increase in the mortality over 1883 was in Dukes and Nantucket, and the next in Franklin; the greatest decrease was in Hampshire. In Berkshire, Bristol, Essex, Hampden, Hampshire and Worcester, the number of deaths was also in excess of that in the preceding year, while in Middlesex, Norfolk, Plymouth and Suffolk there was a decrease. In Barnstable, the mortality was the same for both years. The approximate rate per 10,000 is 2·7 for croup and 5·3 for diphtheria, or a total of 8·0, which is ·2 lower than the rate for 1883, and 1·7 lower than the average for the previous twenty-five years. In proportion to the mortality from all causes, the ratio is ·33 of one per cent. below the average for the above period.

The largest percentage of deaths, as usual, took place in the fourth quarter of the year and under the age of five. The mortality among males represents a ratio of 49·8 per cent.

Dysentery. — Two hundred and fifty-four deaths occurred from this disease in 1884, or 82 less than in 1883. Of this number, 90 took place in August, 64 in September, and 29 in July — an aggregate equal to 72 per cent. of the total mortality. Forty per cent. of the deaths were in children below the age of five, and 39 per cent. in persons over sixty. Franklin County exhibits the largest ratio of decrease in the mortality, in comparison with the preceding year, and Hampshire, next to Dukes and Nantucket, the highest ratio of increase.

Measles. — With the exception of 1876, 1879 and 1882, the mortality from measles was smaller, in 1884, than in any year since 1860, and less by 246 deaths than in 1883, in which year the fatality was excessive. During the period mentioned above, the number of deaths (428), which occurred in 1872, was larger than in any other year. In comparison with the average for twenty-five years, the statistics for the past year indicate a decrease of 62·8 per cent. in the mortality from this disease.

Of the total number of deaths, 64, or 85·3 per cent., occurred below the age of five, and 2 between forty and fifty. The highest mortality was reached in December.

TABLE 114. — *Deaths from Pneumonia, by Counties, 1884.*

COUNTIES.	Deaths.	COUNTIES.	Deaths.
Barnstable,	29	Hampshire,	51
Berkshire,	87	Middlesex,	487
Bristol,	192	Norfolk,	109
Dukes and Nantucket, .	5	Plymouth,	75
Essex,	304	Suffolk,	817
Franklin,	43	Worcester,	295
Hampden,	152	The State,	2,646

Pneumonia caused 2,646 deaths in 1884, or 299 less than in the preceding year — a decrease, to which all the counties, with the exception of Worcester, contributed. This number is equivalent to an estimated rate of 13·4 per 10,000 of the population, as compared with 15·3 in 1883 and 1882, 15·8 in 1881 and 11·2 in 1871. In proportion to the total mortality, (Table 115) the State, as a whole, exhibits a ratio of 7·15 per cent., or ·58 of one per cent. less than the average for the past ten years. Suffolk holds relatively the first rank in the above proportion, with a percentage of 8·05, and Dukes and Nantucket the lowest, with a percentage of 2·75. The order of the remaining counties is as follows: Middlesex, 7·81 per cent.; Hampden, 7·26 per cent.; Worcester, 7·01 per cent.;

Franklin, 6·84 per cent. ; Berkshire, 6·76 per cent. ; Norfolk, 6·69 per cent. ; Hampshire, 6·44 per cent. ; Essex, 6·29 per cent. ; Bristol, 6·14 per cent. ; Plymouth, 5·87 per cent. ; Barnstable, 5·19 per cent. It is somewhat remarkable, that, in proportion to the total mortality, as was shown in a previous report, the counties, in which occur the highest percentages from consumption, should, on the contrary, exhibit, as a rule, lower ratios from pneumonia.

The State,	8.40	7.37	6.29	6.93	8.32	8.68	8.14	7.97	8.07	7.15

By far the largest proportion of deaths occurs under the age of five, and the next largest between 60 and 80. From 5 to 10, there seems to be the greatest power of resistance to the fatality of this disease. (Table 116.)

Berkshire,	8	Middlesex,	117
Bristol,	18	Norfolk,	36
Dukes and Nantucket, .	—	Plymouth,	15
Essex,	98	Suffolk,	213
Franklin,	4	Worcester,	59
Hampden,	46	The State,	627

Scarlet Fever. — Six hundred and twenty-seven deaths occurred from scarlet fever in 1884, as against 575 in 1883, with an estimated rate of 3.7 per 10,000, in comparison with 6.5, as an average for the previous twenty-two years. This rate is lower than in any year of the above period, with the exception of 1866, 1877, 1878, 1880, 1881 and 1882. In proportion to the total mortality, the percentage of deaths from scarlet fever was .4 of one per cent. higher in 1884 than the mean for the term of twenty-two years.

Hampshire County presents the highest rates of increase over the previous year, while in Barnstable, and Dukes and Nantucket no deaths occurred, as was the case, likewise, in the latter counties in 1882 and 1883. In Franklin, Norfolk and Suffolk there were fewer deaths than in 1883.

Of the 627 deaths, 291 were of males and 336 of females; 417, or 66.5 per cent. occurred under five years of age; 150, between 5 and 10; 26, between 10 and 15; 17, between 20 and 30; 14, between 15 and 20; 2, between 30 and 40. Eighty-three deaths took place in December, 68 in January, 3

in November, 56 each in October and May, 51 in March, 48 in April, 46 in February, 44 in August, 41 each in September and June, 33 in July. Forty-nine and four-tenths per cent. of the total number occurred in the first half of the year, as compared with 58·8 per cent. in 1883, and 46·8 per cent. in 1882.

There were but three (3) deaths from small-pox during the past year, — a smaller number than in any year since 1854, with the exception of 1878, when there occurred two deaths. Of this number, two were in Longmeadow in Hampden County, and one in Boston in Suffolk.

Two of the deaths were of males and one of a female: one occurred under five years of age, one between 5 and 10, and one between 20 and 30. February, March and April were each credited with one death.

Typhoid Fever caused 875 deaths in 1884, or 15 more than in the preceding year. This is equal to 2·36 per cent. of the

total mortality for the year, and to a rate of 4·3 per 10,000, as against 7·2, as the average for the preceding twenty-six years. Only four times since 1859 has the mortality been less; viz., in 1877, 1878, 1879 and 1883.

There were 455 deaths of males, and 420 of females, of which, as a total, 31·2 per cent. occurred between the ages of 20 and 30; 15·2 per cent. between 15 and 20; 13·3 per cent. between 40 and 50; 59·7 per cent. for the remaining periods of life.

One hundred and forty-nine deaths occurred in both September and October; 116 in November; 89 in August; 72 in December; 51 in January; 48 in April; 45 in June; 42 in July; 40 in March; 37 in both February and May. Of the total number, 30·2 per cent. occurred in the autumn months.

Table 122 shows the number of deaths from typhoid fever, by counties, for fifteen years. By its analysis, it is found that there has been a decrease of 14·9 per cent. in the mortality for the State, as compared with the average for the above period. Of all the counties, the greatest proportionate decrease has been in Dukes and Nantucket. In Barnstable, Bristol, Dukes and Nantucket, Hampden, Hampshire, Middlesex, Norfolk and Suffolk, there was an increased number of deaths over the record of the previous year.

Whooping-Cough. — Of the 410 deaths, which occurred from this disease in 1884, the highest percentage, in proportion to the total mortality in each county, was in Suffolk, while Norfolk and Plymouth stand relatively very high in rank. In Dukes and Nantucket, there have been but five deaths in the last ten years — 2 in 1877 and 3 in 1878. In Hampden and Hampshire alone, of all the counties, was there a smaller mortality than in 1883, in which year, however, they both took the leading rank in the above proportion. Ninety-eight per cent. of the total number occurred in children and infants under five years of age; one death took place between 40 and 50.

The greatest mortality, as in the previous year, was in August. In this month there were 76 deaths, 56 each in July and September, 33 in May, 31 in October, 29 each in November and June, 28 in December, 23 in March, 18 in February, 16 in April, 15 in January. Two hundred and two (202) of the deaths occurred among males, and 208 among females.

V.—5. <i>Execution</i> ,	—	—	—	—	—	—	—	—	—	—	—	—	—	—
Sudden, cause unknown,	11	—	—	1	—	1	—	—	—	1	2	2	1	3
Causes not specified,†	524	7	37	44	—	68	20	27	11	88	33	24	83	82

* Totals; manner not stated.

† Comprising 108 deaths from "Hemorrhage," 68 from "Tumor," 28 from "Inflammation," and 220 deaths either returned as "Unknown," or of which no cause was stated in the Returns.

NOTE. — When a person is "found drowned," the case is classed under "accident or negligence." (V.—1. 4.) Cases of death from cold, heat, drinking cold water, lightning, surgical operations, and exposure, are classed under "accident or negligence." (V.—1. 6.) As "stricture of the urethra" is almost invariably the result of gonorrhœa, it is classed as (I.—2. 2). — [Dr. Farr.]

NOTE.

Previously to the adoption, in the Registration Report of 1855, of the present NOSOLOGICAL ARRANGEMENT of Tables IX. and X., the term "Infantile" in those Tables included under a single designation not only all deaths returned under the several heads "Infantile," "Premature," or "Premature Births," but also all ascribed to "Debility" or "Unknown" causes, if under two years of age.

This plan was continued until the Registration Report of 1868, in which, to secure greater accuracy, the method now employed was adopted, by which deaths returned under the head of "Premature," "Premature Births," or "Infantile," are stated *separately* in Table VIII., and *combined* in Tables IX. and X. Deaths of children under two years, from "Debility" or "Unknown" cause, are no longer classed as "Infantile."

See Registration Report of 1868, p. cv, for a fuller explanation.

TABLE X. — CAUSES OF DEATH. — COMPARATIVE MORTALITY.

Exhibiting the Number of Deaths from Specified Causes (Nosologically Arranged) during each of the Five Years 1880-81-82-83-84, with the Number of Deaths, annually, to 100,000 of the Population; also the Number and Percentage of Deaths during the Five Years 1880-84, and during the entire Registration Period of Forty-three Years and Eight Months, ending Dec. 31, 1884.*

[Still-births included.]

APPENDIX.

APPENDIX.

L A W S

CONCERNING THE REGISTRATION OF BIRTHS, MARRIAGES AND DEATHS.

[Public Statutes — Chapter 32.]

OF THE REGISTRY AND RETURN OF BIRTHS, MARRIAGES AND DEATHS.

SECTION 1. The clerk of each city and town shall receive or obtain, and record and index, the following facts concerning the births, marriages and deaths therein, separately numbering and recording the same in the order in which he receives them, designating in separate columns as follows: —

In the record of births, the date of birth, the place of birth, the name of the child, (if it has any,) the sex and color of the child, the names and the places of birth of the parents, the occupation of the father, the residence of the parents, and the date of the record;

In the record of marriages, the date of the marriage, the place of marriage, the name, residence, and official station of the person by whom married, the names and the places of birth of the parties, the residence of each, the age and color of each, the condition of each, (whether single or widowed,) the occupation, the names of the parents, and the date of the record.

In the record of deaths, the date of the death, the name of the deceased, the sex, the color, the condition, (whether single, widowed, or married,) the age, the residence, the occupation, the place of death, the place of birth, the names and places of birth of the parents, the disease or cause of death, the place of burial, and the date of the record.

SECT. 2. Parents shall give notice to the clerk of their city or town of the births and deaths of their children; every householder shall give like notice of every birth and death happening in his house; the eldest person next of kin shall give such notice of the death of his kindred; the keeper of a workhouse, house of correction, prison, hospital, or almshouse, except the state almshouse, and the master or other commanding officer of a ship, shall give like notice of every birth and death happening among the persons under his charge. Whoever neglects to give such notice for the space of six months after a birth or death shall forfeit a sum not exceeding five dollars.

SECT. 3. A physician who has attended a person during his last illness shall, when requested within fifteen days after the decease of

such person, forthwith furnish for registration a certificate of the duration of the last sickness, the disease of which the person died, and the date of his decease, as nearly as he can state the same. If a physician refuses or neglects to make such certificate, he shall forfeit ten dollars to the use of the town in which he resides.

SECT. 4. Every sexton, undertaker, or other person having charge of a burial-ground, and every undertaker or superintendent of burials having charge of the funeral rites preliminary to the interment of a human body, shall forthwith obtain and return to the clerk of the city or town in which the deceased resided, or the death occurred, the facts required by this chapter to be recorded by said officer concerning the deceased, and the person making such return shall receive from his city or town the fee of twenty-five cents therefor.

SECT. 5. No human body shall be buried or removed from any city or town until a proper certificate has been given by the clerk or registrar to the undertaker, sexton, or other person performing the burial or removing the body. Such certificate shall state that the facts required by this chapter have been returned and recorded; and no clerk or registrar shall give such certificate or burial permit until the certificate of the cause of death has been obtained from the physician, if any, in attendance at the last sickness of the deceased, and placed in the hands of said clerk or registrar; and in cities and towns where there are boards of health, the certificate of the cause of death shall also be approved by such board before a permit to bury is given by the registrar or clerk. Upon application, the chairman of the board of health, or any physician employed by any city or town for such purpose, shall sign the certificate of the cause of death to the best of his knowledge and belief, if there has been no physician in attendance. He shall also sign such certificate, upon application, in case of death by dangerous contagious disease, or in any other event when the certificate of the attending physician cannot for good and sufficient reasons be early enough obtained. In case of death by violence, the medical examiner attending shall furnish the requisite medical certificate. Any person violating the provisions of this section shall be punished by fine not exceeding twenty-five dollars.

SECT. 6. The boards of health of towns and the mayor and aldermen of cities shall, on or before the first day of July in each year, license a suitable number of undertakers to take charge of the funeral rites preliminary to the interment of a human body.

SECT. 7. Physicians and midwives shall on or before the fifth day of each month report to the clerk of each city and town, except Boston, a correct list of all children born therein during the month next preceding at the birth of which they were present, stating the place and date of each birth, and the parents' names.

SECT. 8. The clerk of each city and town shall give public notice that he is prepared to furnish, to all physicians and midwives applying therefor, blanks for returns under the preceding section.

SECT. 9. Any physician or midwife neglecting to report such list for ten days after it is due shall for each offence forfeit a sum not exceeding twenty dollars.

SECT. 10. The clerk of each city and town shall annually, on or before the first day of March, transmit to the secretary of the common-

wealth certified copies of the records of the births, marriages, and deaths which have occurred therein during the year ending on the last day of the preceding December.

SECT. 11. The record of the town clerk relative to a birth, marriage, or death, shall be prima facie evidence, in legal proceedings, of the facts recorded. A certificate, signed by the town clerk for the time being, shall be admissible as evidence of such record.

SECT. 12. The clerk of each city and town, (except in such cities and towns as choose a registrar, in which cases the provisions of this section shall apply to the registrar.) for receiving or obtaining, recording, indexing, and returning the facts relating to marriages, births, and deaths occurring therein, shall be entitled to receive from the city or town for each marriage, fifteen cents; for each birth, fifty cents; for each death returned to him by the persons specified in sections two, three, and four, twenty cents for each of the first twenty entries, and ten cents for each subsequent entry; for each death not so returned, but by him obtained and recorded, thirty-five cents, as the same shall be certified by the secretary of the commonwealth; but a city or town containing more than ten thousand inhabitants may limit the aggregate compensation allowed to their clerk or registrar. He shall forfeit not less than twenty nor more than one hundred dollars for each refusal or neglect to perform any duty required of him by sections one, two, three, four, ten, twelve, fourteen, sixteen, and eighteen.

SECT. 13. The superintendent of the state almshouse shall obtain, record, and make return of the facts in relation to the births and deaths which occur in his institution, in like manner as is required of town clerks. The clerk of a town in which such almshouse is located shall, in relation to the births and deaths of persons in said almshouse, be exempt from the duties otherwise required of him by this chapter.

SECT. 14. The secretary shall at the expense of the commonwealth prepare and furnish to the clerks of the several cities and towns, and to the superintendent of the state almshouse, blank books of suitable quality and size to be used as books of record under this chapter, blank books for indexes thereto, and blank forms for returns, on paper of uniform size; and shall accompany the same with such instructions and explanations as may be necessary and useful. City and town clerks shall make such distribution of blank forms of returns furnished by the secretary as he shall direct.

SECT. 15. The secretary shall cause the returns received by him for each year to be bound together in one or more volumes with indexes thereto. He shall prepare from the returns such tabular results as will render them of practical utility, make report thereof annually to the general court, and do all other acts necessary to carry into effect the provisions of this chapter.

SECT. 16. A city or town containing more than ten thousand inhabitants may choose a person other than the clerk to be registrar, who shall be sworn, and to whom all the provisions of this chapter concerning clerks shall apply. The returns and notices required to be made and given to clerks shall be made and given to such registrar under like penalties.

SECT. 17. The secretary of the commonwealth shall prosecute, by

an action of tort in the name of the commonwealth, for the recovery of any penalty or forfeiture imposed by sections two, three, twelve, sixteen, and eighteen.

SECT. 18. A city or town may make rules and regulations to enforce the provisions of this chapter, or to secure a more perfect registration of births, marriages, and deaths therein.

[Public Statutes — Chapter 145.]

OF MARRIAGE.

CERTAIN MARRIAGES PROHIBITED.

SECTION 1. No man shall marry his mother, grandmother, daughter, granddaughter, step-mother, sister, grandfather's wife, son's wife, grandson's wife, wife's mother, wife's grandmother, wife's daughter, wife's granddaughter, brother's daughter, sister's daughter, father's sister, or mother's sister.

SECT. 2. No woman shall marry her father, grandfather, son, grandson, step-father, brother, grandmother's husband, daughter's husband, granddaughter's husband, husband's father, husband's grandfather, husband's son, husband's grandson, brother's son, sister's son, father's brother, or mother's brother.

SECT. 3. In all cases in which the relationship mentioned in the two preceding sections is founded on marriage, the prohibition shall continue notwithstanding the dissolution by death or divorce of the marriage on which such relationship is founded, unless the divorce is for a cause which shows such marriage to have been originally unlawful or void.

SECT. 4. All marriages contracted while either of the parties has a former wife or husband living, except as is provided in chapter one hundred and forty-six, shall be void.

SECT. 5. No insane person or idiot shall be capable of contracting marriage.

SECT. 6. No magistrate or minister shall solemnize a marriage, when he has reasonable cause to suppose the male to be under the age of twenty-one years or the female to be under the age of eighteen years, except with the consent of the parent or guardian having the custody of the minor, if there is any such parent or guardian in the commonwealth competent to act.

SECT. 7. Every marriage, solemnized within this commonwealth, which is prohibited on account of consanguinity or affinity between the parties, or on account of either of them having a former wife or husband living, or when either party was insane or an idiot, shall be void without a decree of divorce or other legal process.

SECT. 8. Every marriage solemnized when either party was under the age of consent shall be similarly void, if the parties separate during such nonage, and do not afterwards cohabit.

SECT. 9. The validity of a marriage shall not be questioned in the

trial of a collateral issue on account of the insanity or idiocy of either party, but such question shall only be raised in a process instituted to test such validity in the lifetime of both parties.

SECT. 10. When persons resident in this commonwealth, in order to evade any of the provisions of the first five sections of this chapter, and with an intention of returning to reside in this commonwealth, go into another state or country and there have their marriage solemnized, and afterwards return and reside here, the marriage shall be deemed void in this commonwealth.

SECT. 11. When the validity of a marriage is doubted, either party may file a libel for annulling such marriage, or, when the validity of a marriage is denied or doubted by either party, the other party may file a libel for affirming the same. Such libel shall be filed in the same manner as a libel for divorce, and all the provisions of chapter one hundred and forty-six relative to libels for divorce, and section twenty-four of said chapter relative to the powers of the court in relation thereto, shall, so far as applicable, apply to libels under this section. Upon proof of the nullity or validity of the marriage, it shall be declared void or affirmed by a decree of the court, and such decree of nullity may be made notwithstanding the marriage was solemnized out of the commonwealth, if the libellant had his domicile in the commonwealth when the marriage was solemnized and also when the libel was filed, and such decree affirming a marriage shall be conclusive upon all persons concerned.

LEGITIMACY, CARE, ETC., OF ISSUE OF VOID MARRIAGES.

SECT. 12. The issue of a marriage declared void on account of consanguinity or affinity between the parties shall be deemed to be illegitimate.

SECT. 13. The issue of a marriage declared void on account of the nonage, insanity, or idiocy of either party shall be deemed to be the legitimate issue of the parent who was capable of contracting the marriage.

SECT. 14. When a marriage is declared void on account of a prior marriage of either party, and it appears that the second marriage was contracted in good faith and with the full belief of the parties that the former husband or wife was dead, that fact shall be stated in the decree, and the issue of the second marriage, born or begotten before the commencement of the suit, shall be deemed to be the legitimate issue of the parent capable of contracting the marriage.

SECT. 15. Upon or after a decree of nullity the court shall have similar power to make orders concerning the care, custody, and maintenance of the minor children of the parties as upon a decree of divorce.

NOTICE OF INTENTION OF MARRIAGE.

SECT. 16. Persons intending to be joined in marriage in this commonwealth shall before their marriage cause notice of their intention to be entered in the office of the clerk or registrar of the city or town in which they respectively dwell, or, if they do not dwell within the

commonwealth, in the office of the clerk or registrar of the city or town in which they propose to have the marriage solemnized. If there is no such clerk or registrar in the place of their residence, the entry shall be made in an adjoining city or town.

SECT. 17. The clerk or registrar shall deliver to the parties a certificate under his hand, specifying the time when notice of the intention of marriage was entered with him, together with all facts in relation to the marriage which are required by law to be ascertained and recorded, except those respecting the person by whom the marriage is to be solemnized. Such certificate shall be delivered to the minister or magistrate before whom the marriage is to be contracted, before he proceeds to solemnize the same.

SECT. 18. If a clerk or registrar issues such certificate to a male under the age of twenty-one years, or to a female under the age of eighteen years, when he has reasonable cause to suppose the person to be under such age, except upon the application or consent in writing of the parent, master, or guardian of such person, he shall forfeit a sum not exceeding one hundred dollars; but if there is no parent, master, or guardian in this commonwealth competent to act, a certificate may be issued without such application or consent.

SECT. 19. The clerk or registrar may require of any person applying for such certificate an affidavit setting forth the age of the parties; which affidavit shall be sworn to before a justice of the peace, and shall be sufficient proof of age to authorize the issuing of the certificate.

SECT. 20. Whoever, when applying for such a certificate, wilfully makes a false statement in relation to the age, residence, parent, master, or guardian of either of the parties intending marriage, shall forfeit a sum not exceeding two hundred dollars.

SECT. 21. When a marriage is solemnized in another state between parties living in this commonwealth, and they return to dwell here, they shall within seven days after their return file with the clerk or registrar of the city or town where either of them lived at the time a certificate or declaration of their marriage, including the facts concerning marriages required by law; and for every neglect so to do they shall forfeit ten dollars.

BY WHOM AND HOW MARRIAGE MAY BE SOLEMNIZED.

SECT. 22. A marriage may be solemnized by a justice of the peace or by a minister of the gospel, ordained according to the usage of his denomination, who resides in the commonwealth and continues to perform the functions of his office; but every marriage shall be solemnized in the city or town in which the person solemnizing it resides, or in which one or both of the persons to be married reside.

SECT. 23. A marriage among the people called Friends or Quakers may be solemnized in the manner heretofore used and practised in their societies.

SECT. 24. Every justice of the peace, minister, and clerk or keeper of the records of a meeting wherein marriages among Friends or Quakers are solemnized shall make a record of each marriage solemnized before him, or in such meeting, and of all facts relating to the marriage which are required by law to be recorded. He shall

also, between the first and tenth days of each month, return a copy of all such records for the month next preceding to the clerk or registrar of the city or town in which the marriage was solemnized, and shall, when one or both of the parties to the marriage resided in a city or town other than that in which the marriage was solemnized, return a copy of the record of such marriage to the clerk or registrar of the city or town in which either party resided, and to the clerks or registrars of both cities or towns when the parties resided in different places. All marriages so returned shall be recorded by the clerk or registrar, and every person neglecting to make the returns required by this section shall forfeit for each neglect not less than twenty nor more than one hundred dollars.

SECT. 25. A justice of the peace or minister who joins persons in marriage contrary to the provisions of this chapter, knowing that the marriage is not duly authorized, shall forfeit not less than fifty nor more than one hundred dollars.

SECT. 26. Whoever undertakes to join persons in marriage, knowing that he is not authorized so to do, shall be imprisoned in the jail for a term not exceeding six months, or pay a fine of not less than fifty nor more than two hundred dollars.

SECT. 27. No marriage solemnized before a person professing to be a justice of the peace or a minister of the gospel, or solemnized in the society of Friends according to the usages of said society, shall be deemed or adjudged to be void, nor shall the validity thereof be in any way affected by want of jurisdiction or authority in such person or society, or by an omission or by informality in the manner of entering the intention of marriage, if the marriage is in other respects lawful, and is consummated with a full belief on the part of the persons so married, or of either of them, that they have been lawfully joined in marriage.

SECT. 28. Marriages solemnized in a foreign country by a consul or diplomatic agent of the United States shall be valid in this commonwealth.

EVIDENCE OF MARRIAGE.

SECT. 29. The record of a marriage, made and kept as prescribed by law by the person before whom the marriage has been solemnized, or by the clerk or registrar of a city or town, or a copy of such record duly certified, shall be received in all courts and places as presumptive evidence of such marriage.

SECT. 30. When a marriage has been solemnized by a consul or diplomatic agent of the United States, a copy of the record or a certificate from such consul or agent shall be presumptive evidence of such marriage.

SECT. 31. When the fact of marriage is required or offered to be proved before a court, evidence of the admission of such fact by the party against whom the process is instituted, or evidence of general repute or of cohabitation as married persons, or any other circumstantial or presumptive evidence from which the fact may be inferred, shall be competent.

[Public Statutes, Chapter 199.]

SECT. 17. For lawfully solemnizing and certifying a marriage, a minister or justice of the peace shall be entitled to receive one dollar and twenty-five cents.

[St. 1883, Chapter 158.]

AN ACT IN RELATION TO THE RETURNS OF BIRTHS • BY PHYSICIANS
AND MIDWIVES.

Be it enacted, etc., as follows:

SECTION 1. Section seven of chapter thirty-two of the Public Statutes is amended so as to read as follows: "Section 7. Physicians and midwives shall, on or before the fifth day of each month, report to the clerk of each city or town, except Boston, a correct list of all children, born therein during the month next preceding, at whose birth they were present, stating the date and place of each birth, the name of the child (if it has any), the sex and color of the child, the name, place of birth and residence of the parents, and the occupation of the father. The fee of the physician or midwife shall be twenty-five cents for each birth so reported, and shall be paid by the city or town in which the report is made."

SECT. 2. This act shall take effect upon its passage. [*Approved May 3, 1883.*]

LAWS CONCERNING DIVORCE.

[Public Statutes, Chapter 146.]

CAUSES FOR DIVORCE.

SECTION 1. A divorce from the bond of matrimony may be decreed for adultery, impotency, extreme cruelty, utter desertion continued for three consecutive years next prior to the filing of the libel, gross and confirmed habits of intoxication, cruel and abusive treatment, or, on the libel of the wife, when the husband, being of sufficient ability, grossly or wantonly and cruelly refuses or neglects to provide suitable maintenance for her.

SECT. 2. Such divorce may also be decreed when either party has separated from the other without his or her consent and has united with a religious sect or society that professes to believe the relation of husband and wife void or unlawful, and has continued united with such sect or society for three years, refusing during that term to cohabit with the other party; or when either party has been sentenced to confinement at hard labor for life or for five years or more in the state prison or in a jail or house of correction; and after a divorce for such cause, no pardon granted to the party so sentenced shall restore such party to his or her conjugal rights.

SECT. 3. When a divorce from bed and board under laws heretofore in force or a divorce nisi has been decreed and the parties have lived separately for three consecutive years next after the decree, a divorce from the bonds of matrimony may be decreed upon the petition of the party in whose favor the previous decree was granted; and when the parties have lived separately for five consecutive years next after such decree, a divorce from the bond of matrimony may be decreed in favor of either party.

SECT. 4. Except as provided in the following section, no divorce shall be decreed if the parties have never lived together as husband and wife in the commonwealth; nor shall a divorce be decreed for a cause occurring in another state or country, unless, before such cause occurred, the parties had lived together as husband and wife in the commonwealth, and one of them lived in the commonwealth at the time when the cause occurred.

SECT. 5. When the libellant has resided in the commonwealth for five years next preceding the filing of the libel, or, if the parties were inhabitants of the commonwealth at the time of their marriage, when the libellant has been such an inhabitant for three years next preceding such filing, a divorce may be decreed for any cause allowed by law, whether it occurred in the commonwealth or elsewhere, unless it appears that the libellant has removed into the commonwealth for the purpose of obtaining a divorce.

LIBELS FOR DIVORCE.

SECT. 6. Libels for divorce shall be heard and determined in the supreme judicial court held for a county in which one of the parties lives, except that, when the libellant has left the county in which the parties have lived together, the adverse party still living therein, the libel shall be heard and determined in the court held for that county.

SECT. 7. Every such libel shall be signed by the libellant, if of sound mind and of legal age to consent to marriage; otherwise it may be signed by the guardian of the libellant or by a person admitted by the court to prosecute the libel as his or her next friend.

SECT. 8. The libel may be presented to the supreme judicial court or to a justice thereof in any county, in term time or vacation, or it may be filed in the office of the clerk of said court in vacation.

SECT. 9. The court, justice, or clerk may order the adverse party to be summoned to appear and answer at the court having jurisdiction of the cause, by the publication of the libel or of the substance thereof, with the order thereon, in one or more newspapers to be designated in the order, or by delivering to such party an attested copy of the libel and a summons, or in such other manner as may seem most proper and effectual; but when such order is made by a clerk, the court or any justice thereof may order such additional notice to be given as may seem proper.

* * * * *

SECT. 18. The court before which a libel for divorce is pending may, without entering a decree of divorce, cause the libel to be continued upon the docket from time to time, and during such continuance may make such orders and decrees concerning a temporary

separation of the parties, the separate maintenance of the wife, and the custody and support of minor children, as in its judgment the interests of the parties and the necessities of the case demand, and such orders and decrees may be changed or annulled as the court may determine, and any orders or decrees of said court under this section shall, while they are in force, supersede any order or decree of the probate court under section thirty-three of chapter one hundred and forty-seven, and may suspend the right of said court to act under said section.

SECT. 19.* All decrees of divorce shall in the first instance be decrees nisi, to become absolute after the expiration of six months from the entry thereof, on application of either party to the clerk of the court, and on such application the clerk shall enter a final decree, unless the court has for sufficient cause, on application of any party interested, otherwise ordered.

SECT. 20. No libel for divorce on the ground of desertion shall be defeated by a temporary return or other act done by the party deserting, if it appears that such return or other act was not made or done in good faith, but with the intent to defeat the obtaining of a divorce by the other party.

RESUMPTION OF FORMER NAME BY WIFE.

SECT. 21. The court upon granting a divorce to a woman may allow her to resume her maiden name or the name of any former husband.

RIGHT TO MARRY AGAIN.

SECT. 22. After a divorce from the bond of matrimony either party may marry again as if the other were dead, except that the party against whom the divorce was granted shall not marry within two years from the time of the entry of the final decree of divorce.

* * * * *

FOREIGN DIVORCES.

SECT. 41. A divorce decreed in another state or country according to the laws thereof, and by a court having jurisdiction of the cause and of both the parties, shall be valid and effectual in this commonwealth; but when an inhabitant of this commonwealth goes into another state or country to obtain a divorce for a cause which occurred here while the parties resided here, or for a cause which would not authorize a divorce by the laws of this commonwealth, a divorce so obtained shall be of no force or effect in this commonwealth.

CRIMINAL PROVISIONS.

SECT. 42. If persons divorced from the bond of matrimony cohabit as husband or wife or live together in the same house, they shall be deemed to be guilty of adultery.

* * * * *

[St. 1882, Chapter 194.]

AN ACT CONCERNING STATISTICS OF DIVORCE.

Be it enacted, etc., as follows:

SECTION 1. The clerks of courts for the several counties, and of the supreme judicial court for the county of Suffolk, shall, annually, during the month of February, make returns to the secretary of the Commonwealth in relation to libels for divorce in their respective counties for the calendar year next preceding. Such returns shall specify the following details: the number of libels pending at the beginning of the year; the number of libels filed within the year; the number of divorces granted; the number of divorces refused; the number of libels contested; the number of libels uncontested; the alleged cause for divorce in each case; the sex of the libellant and the length of time the parties have been married; and the number of cases in which notice has been given to the district-attorney for prosecution under section forty-four of chapter one hundred and forty-six of the Public Statutes, and the criminal offence for which divorce has been granted in such cases.

SECT. 2. The secretary shall furnish the said clerks of courts with suitable blank forms for the returns provided for in the preceding section.

SECT. 3. The secretary shall annually prepare from said returns full and complete abstracts and tabular statements of the facts relating to divorces for each county, and embody such abstracts and statements, with necessary analyses, in the annual reports to the legislature relating to the registry of births, deaths and marriages.

SECT. 4. The first return to be made under this act shall include the details specified in section one, so far as practicable, for the years eighteen hundred and seventy-nine, eighteen hundred and eighty, eighteen hundred and eighty-one, and eighteen hundred and eighty-two.

SECT. 5. This act shall take effect upon its passage. [*Approved May 1, 1882.*]

[St. 1882, Chapter 223.]

AN ACT RELATING TO THE MAKING AND ENTERING OF DECREES OF DIVORCE.

Be it enacted, etc., as follows:

SECTION 1. Section nineteen of chapter one hundred and forty-six of the Public Statutes is amended so as to read as follows: "Section 19. All decrees of divorce shall in the first instance be decrees *nisi*, to become absolute after the expiration of six months from the entry thereof, without further notice thereof by publication or otherwise, on application of either party to the court, or any justice thereof, in term time or vacation; and on such application the court or justice shall make a final decree, unless the court has for sufficient cause, on application of any party interested, otherwise ordered."

SECT. 2. This act shall take effect upon its passage. [*Approved May 15, 1882.*]

[Stat. 1884. Chapter 219.]

AN ACT RELATING TO DIVORCE IN CASES OF LONG AND UNEX-
PLAINED ABSENCE OF THE LIBELLE.

Be it enacted, etc., as follows :

SECTION 1. A divorce from the bond of matrimony may be decreed for any of the causes allowed by law, notwithstanding the fact that the libellee has been continuously absent for such a period of time and under such circumstances as would raise a presumption of death.

SECT. 2. This act shall take effect upon its passage. [*Approved May 8, 1884.*]

[Stat. 1885. Chapter 379.]

AN ACT RELATING TO MEDICAL EXAMINERS.

Be it enacted, etc., as follows :

SECTION 1. Section nine of chapter twenty-six of the Public Statutes is amended to read as follows : — *Section 9.* In the county of Suffolk each medical examiner shall receive from the treasurer of the county, in full for all services performed by him, a salary of three thousand dollars a year, and the associate medical examiner a salary of five hundred dollars ; but if the said associate medical examiner serves in any year more than two months, at the request of either medical examiner, he shall, for such service in excess of two months, be paid at the same rate as such medical examiner, and such compensation shall be deducted from the salary of the medical examiner in whose stead he serves. The medical examiners in other counties shall receive fees as follows : For a view without an autopsy, five dollars ; for a view and autopsy, thirty dollars ; and for travel, at the rate of ten cents a mile to and from the place of view.

SECT. 2. When a medical examiner deems it necessary to have a physician present at an autopsy as one of the witnesses, as provided in section eleven of chapter twenty-six of the Public Statutes, such physician shall be allowed five dollars for his services. Other witnesses required by law to be present at an autopsy shall be allowed two dollars each.

SECT. 3. Every medical examiner shall, annually, on or before the first day of March, transmit to the secretary of the Commonwealth certified copies of the records of all deaths which have occurred during the year ending on the last day of the preceding December, the cause and manner of which he has investigated, in accordance with the requirements of chapter twenty-six of the Public Statutes : *provided, however,* if the term of office of any medical examiner shall end before the said last day of December, he shall send to the secretary of the Commonwealth, within the sixty days next ensuing upon the expiration of his commission as a medical examiner, certified copies of the records of all deaths officially investigated by him during that part of the then current calendar year in which he continued in office.

SECT. 4. Each medical examiner shall be entitled to receive from the treasury of the Commonwealth, for recording and returning the facts relating to deaths as herein provided, twenty cents for each of the first twenty entries, and ten cents for each subsequent entry in any year, as certified by the secretary of the Commonwealth, and such allowance and payment shall be made to the medical examiners in Suffolk County for record and returns pursuant to this section, notwithstanding the limitation to the salary fixed by section nine of chapter twenty-six of the Public Statutes as amended by this act. Any medical examiner shall forfeit not less than ten nor more than fifty dollars for each refusal or neglect to fulfil the requirements of section three of this act.

SECT. 5. The secretary shall, at the expense of the Commonwealth, prepare and furnish to the several medical examiners, blank books of suitable quality and size, to be used as books of record under this act, and blank forms for returns, on paper of uniform size.

SECT. 6. The secretary shall cause the returns received by him for each year, in accordance with this act, to be bound together in one volume, with indexes thereto; he shall prepare or cause to be prepared from the said returns such tabular results as will render them of practical utility, and shall make report thereof annually to the general court in connection with the report of the registry and return of births, marriages and deaths required by section fifteen of chapter thirty-two of the Public Statutes.

SECT. 7. Every medical examiner shall forthwith file with the district attorney of his district, a report of each autopsy made by him and of his view and personal inquiry in such case under the provisions of chapter twenty-six of the Public Statutes; and shall certify in such report that, in his judgment, the cause and manner of death could not be ascertained by view and inquiry, and that an autopsy was necessary for that purpose. The district attorney shall examine such report, and if of the opinion that such autopsy was necessary shall, except in the county of Suffolk, so certify to the county commissioners, having jurisdiction over the place where the autopsy is held, and no fee for any autopsy shall be certified by the commissioners for payment until such certificate by the district attorney shall have been filed with said commissioners.

SECT. 8. This act shall take effect upon its passage. [*Approved June 19, 1885.*]

STATISTICAL NOSOLOGY.

ADOPTED FOR REGISTRATION IN MASSACHUSETTS.

The following plan of a Nomenclature and Classification of Diseases does not essentially differ from that authorized by the Registrar-General of England to be used in the preparation of the "Weekly Return of Births and Deaths in London," and is also, with slight modifications, identical with that embodied in a report drawn up by William Farr, Esq., M.D., of London, for the consideration of the International Statistical Congress which met at Paris in September, 1855; which report was printed in the Appendix to the Sixteenth Registration Report of the Registrar-General, England.

[NOTE. — This page and those that follow contain two lists of causes of death. The first — that on the left side — may be called the **TABULAR LIST**, and comprises all the heads which it is proposed to admit into the complete tables (IX. and X.), and under which ALL deaths, from whatever cause, are finally distributed. It represents those diseases which, under the same terms, or terms strictly synonymous with them, are found in practice to occur most frequently.

The **SUPPLEMENTAL LIST** is *subordinate* to the first, and contains the principal *special* diseases which it may be considered desirable to note. The figures in this list indicate the corresponding numbers of the tabular list under which such diseases are ultimately arranged.

Table VIII. includes both the Tabular and Supplemental lists; Tables IX. and X. the Tabular list only.]

CAUSES OF DEATH.

TABULAR LIST.	SUPPLEMENTAL LIST.
CLASS I. — ZYMOTIC DISEASES.	<i>Of Diseases of Special Character (or Synonymes.)</i>
ORDER 1. — <i>Miasmatic.</i>	
<p>I. 1. — 1. Small-pox</p> <p>2. Measles</p> <p>3. Scarlatina</p> <p>4. Diphtheria</p> <p>5. Cerebro-spinal Meningitis</p> <p>6. Quinsy</p> <p>7. Croup</p> <p>8. Whooping Cough</p> <p>9. Typhoid (and Infantile Fever)</p> <p>10. Erysipelas</p> <p>11. Metria (Puerperal Fever)</p> <p>12. Carbuncle</p> <p>13. Influenza</p> <p>14. Dysentery</p> <p>15. Diarrhœa</p> <p>16. Cholera Infantum</p> <p>17. Cholera</p> <p>18. Ague</p> <p>19. Remittent Fever</p> <p>20. Rheumatism</p>	<p>I. 1. — 1. Vaccination not stated. Small-pox (second attack). After vaccination. Erysipelas, &c., after vaccination. Chicken-pox Miliaria.</p> <p>3. Angina maligna.</p> <p>5. "Spotted fever."</p> <p>6. Mumps. Tonsillitis.</p> <p>9 Typhus fever</p> <p>10. Pyemia. Hospital gangrene. Erythema.</p> <p>11. Childbed fever.</p> <p>12. Anthrax.</p> <p>18. Intermittent fever</p> <p>19. Yellow fever.</p> <p>20. Rheumatism, with pericarditis, or disease of heart.</p>

CAUSES OF DEATH.

TABULAR LIST.

ORDER 2. — *Enthetic.*

- I. 2. — 1. Syphilis
 2. Stricture of Urethra
 3. Hydrophobia
 4. Glanders
 5. Malignant Pustule
 6. Septicæmia

ORDER 3. — *Dietic.*

- I. 3. — 1. Privation
 2. Purpura and Scurvy
 3. Delirium Tremens, } (Alcoholism)
 4. Intemperance, }

ORDER 4. — *Parasitic.*

- I. 4. — 1. Thrush
 2. Worms, &c.

CLASS II. — CONSTITUTIONAL DISEASES.

ORDER 1. — *Dialhetic.*

- II. 1. — 1. Gout
 2. Dropsy
 3. Anæmia
 4. Cancer
 5. Noma (Canker)
 6. Mortification

ORDER 2. — *Tubercular.*

- II. 2. — 1. Scrofula
 2. Tabes Mesenterica
 3. Phthisis (Consumption of Lungs)
 4. Hydrocephalus

CLASS III. — LOCAL DISEASES.

ORDER 1. — *Nervous System.*

- III. 1. — 1. Cephalitis
 2. Apoplexy
 3. Paralysis
 4. Insanity
 5. Chorea
 6. Epilepsy
 7. Tetanus
 8. Convulsions
 9. *Brain Diseases,* &c.*

SUPPLEMENTAL LIST.

- I. 2. — 1. Gonorrhœa.
 Purulent ophthalmia.
 6. Necusia (usually from
 dissection wounds).

- I. 3. — 1. Want of breast milk.
 2. Rickets.
 Bronchocele.

- I. 4. — 2. Porrigo.
 Scabies.
 Tape worm.
 Hydatids.
 Trichiniasis.

- II. 1. — 3. Leucocythæmia
 4. Soft cancer.
 Epithelioma.
 Sweeps' cancer.
 Melanosis
 Other kinds of cancer.
 Polypus (part not stated).
 Lupus.
 6. Bed-sore.
 Dry gangrene.

- II. 2. — 1. Psoas (Lumbar) abscess.
 White swelling.
 Cretinism (Goitre).
 Adenitis, Cellulitis.
 2. Tubercular peritonitis.
 3. Hæmoptysis.
 4. Tubercular meningitis.

- III. 1. — 1. Phrenitis. Myelitis.
 4. Monomania
 Fright.
 Grief.
 Melancholia.
 Rage.
 6. Hysteria.
 8. Laryngismus stridulus.
 9. Neuralgia.
 Ophthalmia.
 Otitis.
 Dis. of spinal nerve.
 Necrencephalus (Ramol-
 lissement).

* Other diseases of the brain, or diseases of the nervous system, not otherwise distinguished, are referred to this head. *Mutatis mutandis*, the note applies to the corresponding heads in other orders of this class.

ORDER 5. — <i>Execution.</i>	
V. 5. — 1. Hanging	
Sudden, cause unascertained	

NOTE. — Cases of "infantile fever" are classed with typhoid, relapsing and other continued fevers, under one name, "typhoid fever;" of "rheumatic fever," with "rheumatism;" of "hemorrhage," and "abscess," with the diseases of the part affected (if that is stated, as it should always be, in the return). As "stricture of the urethra" is almost invariably the result of gonorrhœa, it is classed as I. 2. — 2. All cases of death returned "unknown," or of which the cause is not stated, and cases of "tumor," "inflammation," or "hemorrhage," of which the locality or part affected is not mentioned, are classed as unknown, and therefore not included in the foregoing table of specified causes.

* Manner stated.

† Manner not stated; return therefore imperfect.
